Vascular Involvement in Eye Diseases, 2024-01-16 Retinal vessels have embryological anatomical and physiological similarities with coronary and cerebral vessels and many systemic vascular pathologies such as hypertension diabetes and cardiovascular disease affect the retinal vessels from function to structure In addition ocular disorders that constitute major public health problems either directly involve retinal and or choroidal vessels such as age related macular degeneration and diabetic retinopathy or have vascular factors as risk factors such as myopia or glaucoma Understanding the vascular processes that occur in these diseases could advance our understanding of visual compromise associated with these disorders and possibly their prevention Moreover using the eye as a window to the vascular health of the human body is also of major interest As such many efforts are made to develop technologies that are able to assess in a non invasive way the functional and structural changes of retinal and choroidal vessels and provide biomarkers of ocular and systemic vascular diseases These technologies could be used to assess not only the individual risk for development and progression of vascular disease at both the systemic and ocular level but also the efficacy of various interventions from prevention and medical treatments to surgical and laser procedures

Retinal Degenerative Diseases John D. Ash, Robert E. Anderson, Matthew M. LaVail, Catherine Bowes Rickman, Joe G. Hollyfield, Christian Grimm, 2018-05-02 The blinding diseases of inherited retinal degenerations have no treatments and age related macular degeneration has no cures despite the fact that it is an epidemic

among the elderly with 1 in 34 affected by the age of 70 The RD Symposium will focus on the exciting new developments aimed at understanding these diseases and providing therapies for them Since most major scientists in the field of retinal degenerations attend the biennial RD Symposia they are known by most as the best and most important meetings in the field The volume will present representative state of the art research in almost all areas of retinal degenerations ranging from cytopathologic physiologic diagnostic and clinical aspects animal models mechanisms of cell death candidate genes cloning mapping and other aspects of molecular genetics and developing potential therapeutic measures such as gene therapy and neuroprotective agents for potential pharmaceutical therapy While advances in these areas of retinal degenerations will be described there will be many new topics that either were in their infancy or did not exist at the time of the last RD Symposium RD2014 These include the role of inflammation and immunity as well as other basic mechanisms in age related macular degeneration several new aspects of gene therapy and revolutionary new imaging and functional testing that will have a huge impact on the diagnosis and following the course of retinal degenerations as well as to provide new quantitative endpoints for clinical trials The retina is an approachable part of the central nervous system CNS and there is a major interest in neuroprotective and gene therapy for CNS diseases and neurodegenerations in general It should be noted that with successful and exciting initial clinical trials in neuroprotective and gene therapy including the restoration of sight in blind children the retinal degeneration therapies are leading the way towards new therapeutic measures for neurodegenerations of the CNS Many of the successes recently reported in these areas of retinal degeneration sprang from collaborations established at previous RD Symposia and many of those will be reported at the RD2018 meeting and included in the proposed volume We anticipate the excitement of those working in the field and those afflicted with retinal degenerations will be reflected in the volume

Corneal Transplantation Namrata Sharma, Ritu Nagpal, Rasik B Vajpayee, 2022-11-09 The cornea is the clear outer layer at the front of the eyeball It acts as a window to the eye The cornea helps to focus light rays onto the retina this image is then transmitted to the brain When the cornea is damaged it can become less transparent or its shape can change This can prevent light reaching the retina and causes the picture transmitted to the brain to be distorted or unclear A corneal transplant also known as keratoplasty or a corneal graft is an operation to remove all or part of a damaged cornea and replace it with healthy donor tissue It is used to improve sight relieve pain and treat severe infection or damage One of the most common reasons for a cornea transplant is a condition called keratoconus which causes the cornea to change shape NHS UK This book is a guide to corneal transplantation keratoplasty for ophthalmic surgeons Divided into seven sections the text begins with an overview of evolution preoperative considerations and eye banking The following sections cover a multitude of keratoplasty techniques including endothelial keratoplasty and their potential complications The book concludes with discussion on alternatives to corneal transplantation The third edition of this comprehensive manual has been fully revised with new topics added to provide surgeons with the

Microglia in Health and Disease: A Unique Immune Cell Population Alessandro Michelucci, Michel Mittelbronn, Diego Gomez-Nicola, 2018-10-05 Microglia are essential for the development and function of the adult brain Their ontogeny together with the absence of turnover from the periphery and the singular environment of the central nervous system CNS make microglia a unique cell population compared to other tissue macrophages The unique properties and functions of microglial cells such as their role in synaptic pruning or the exceptional capacity to scan the brain parenchyma and rapidly react to its perturbations have emerged in recent years In the coming years understanding how microglia acquire and maintain their unique profiles in order to fulfil distinct tasks in the healthy CNS and how these are altered in disease will be essential to develop strategies to diagnose or treat CNS disorders with an immunological component This Research Topic covers several aspects of microglial biology ranging from their origin and the

functional role of microglia during development and lifespan their molecular properties compared with other brain and peripheral immune cells to microglial phenotypes and functional states in neurodegenerative diseases and brain tumours In conclusion the present Research Topic provides a comprehensive overview of our current understanding of several cellular and molecular mechanisms that make microglia a unique immune cell population within the healthy CNS as well as under inflammatory neurodegenerative and tumorigenic processes Neuroinflammation and the Visual System Gemma Caterina Maria Rossi,Ahmed Toosy,Claudia Angela Michela Gandini Wheeler-Kingshott,2021-11-23
