Landforms and Oceans

Landforms and oceans (Earth's oceans) and land can be affected in constructive ways and destructive ways by natural processes.

Constructive - Processes that create landforms (deposition, landfills, volcanic eruptions, floods)

Destructive - Processes that destroy landforms (weathering, erosion, landslides, volcanic eruptions, earthquakes, floods) Natural processes that can affect Earth's oceans and land include:

Weathering - Weathering is a term used to describe processes that break down rocks on or near the surface of the earth. Weathering can be either physical or chemical. These processes cause the surface of the earth to dissolve, decompose, and break into smaller pieces.

Weathering can be caused by:

- 1. Water
- 2. Plants (roots break apart rocks)
- 3. Temperature changes (water freezes in cracks of rocks)

Erosion

Erosion is the movement of sediment and soil by wind, water, ice, and gravity.

Deposition

Deposition is the dropping, or depositing, of sediments by water, wind, or ice. It builds new land on Earth's surface, like a delta at the end of a river or the pile up of a sand dune in the desert. Shells on the beach are deposition by ocean waves. Deposition begins with a "T" and Dunes and Delta begin with a "D"

Coast

Weathering will break rocks down

Erosion moves it all around

Put it here and there withing down

Now we have deposition

Landslides
