

Remember...

To achieve a fair shot, you as an animal that is running or moving should never turn your back to the animal. You should always be aware of your surroundings, and try to keep a clear shot.

Vital Shots

Every hunter wants to bring home the game he or she is seeking, and sometimes this can be done by inflicting a minimal amount of suffering. To achieve this, you must be sure that you understand the anatomy of the game you're shooting and know how to place a shot for a clean kill.

Where To Shoot

- The most effective shot on a large game animal is the vital organs—the heart and lungs. In large game animals, these organs lie in the chest cavity behind the front shoulder. A lung shot is the most effective shot for big game.
- The aim of the vital organs shot is to cause major blood vessel and arterial damage. A shot in this area causes considerable bleeding. If the animal doesn't die immediately and dies in the field, it will have a blood trail that's easy to track.
- Aside from being a good technique, the key to a clean kill is precision. Hunters should limit shots to the vital organs only. If you do not have a clear shot to the vital organs, wait until the animal presents the best possible shot.

The most effective location for a turkey shot is the head and neck. The greatest shot angle for turkeys is head-on, aiming for the head or neck.

Choosing the Proper Shot Angle

The shot angle is the angle at which the animal is standing in relation to the hunter. Knowing which angles offer the most effective—and least effective—shots is an essential part of being a responsible hunter.

Broadside

The broadside shot angle is the preferred shot angle for both hunters and hunted animals for large game animals, such as elk, deer, and bear.

- **Elk:** The broadside position offers several excellent shots for a hunter. The best target is the shoulder and chest area. A bullet of the correct weight that is fired from a distance adequate for the game will break the shoulder bone and sever the lungs or heart.
- **Deer:** The broadside angle offers the best shot for the largest big game animals, such as elk, deer, and bear. For most big game, the shooting spot is straight up from the back side of the front leg, one-third of the way up from the hump of the chest. The arrow will penetrate the rib but not the shoulder bone, so the deer will turn its head forward, and die behind the shoulder.
- **Quarrying Away:** The quarrying away shot angle is when your target is facing away from you but at an angle. The animal is usually looking away from you.
 - **Elk:** For elk hunters, the quarrying away position offers several shooting spots on all big game. The area just behind the shoulder is the best shooting spot for those presentations of the vital organs. Focus on hitting the chest area above the upper front leg.

The preferred shot for large game animals, such as elk, deer, and bear is broadside.

Firing Positions

There are four standard rifle firing positions: prone, standing, sitting, and kneeling.

Prone

The prone position is the most stable of the four positions. Because it's the easiest to hold, it's the best position for maximizing the effectiveness of long-range, head-on, and side-on shots and follow-through.

Safety Tip

Shooting a firearm can cause explosion and permanent hearing loss and eye damage. Wear eye protection.

- When shooting any firearm, always wear properly fitting eye protection for target practice, use an eyepatch or goggles on both eyes with a high frame forehead safety shield.

When hunting, use the same eye protection as when shooting. Always wear eye protection when hunting, and always use eye protection when shooting. The same eye protection and the National Hunting Conservation Association website at www.nhca.org.

- The most suitable eye protection, such as shooting glasses with high-impact lenses, offers shooting protection and eye safety.

Standing

With neither arm supported, this is the most difficult position for firing an accurate shot. Rather than trying to hold the barrel steady, which is impossible, try to keep movement of the barrel to a minimum as you aim at the target. Instead, natural motion will produce the best shot.

Sitting

Both arms are supported by your legs. More so than the prone position, this is the most stable position.

Kneeling

With only one arm braced, the kneeling position is less steady than the prone and sitting positions.
