The Science of Effective Mentorship in STEMM National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Higher Education and Workforce, Committee on Effective Mentoring in STEMM, 2020-01-24 Mentorship is a catalyst capable of unleashing one's potential for discovery, curiosity, and participation in STEMM and subsequently improving the training environment in which that STEMM potential is fostered. Mentoring relationships provide developmental spaces in which students' STEMM skills are honed and pathways into STEMM fields can be discovered. Because mentorship can be so influential in shaping the future STEMM workforce, its occurrence should not be left to chance or idiosyncratic implementation. There is a gap between what we know about effective mentoring and how it is practiced in higher education. The Science of Effective Mentorship in STEMM studies mentoring programs and practices at the undergraduate and graduate levels. It explores the importance of mentorship, the science of mentoring relationships, mentorship of underrepresented students in STEMM, mentorship structures and behaviors, and institutional cultures that support mentorship. This report and its complementary interactive guide present insights on effective programs and practices that can be adopted and adapted by institutions, departments, and individual faculty members.

Chart a New Course Rachele Dene Poth, 2020-03-10 Discover ways to empower students to build confidence in sharing their learning, becoming more responsible digital citizens, and evolving into classroom creators. In researching the top skills students need to succeed in the future, author Rachele Dene Poth identified the following: ability to communicate, work in teams, think creatively, problem solve, and design. This book shows educators how to help students develop these essential skills through authentic, real-world learning experiences, building a pathway for the future of learning and work. In Chart a New Course, educators will get the tools they need to design more purposeful learning experiences to drive student engagement and motivation, promote creativity in learning, model risk-taking, and build classroom culture. Readers will discover how these activities can be woven into instruction rather than layered on existing curriculum, with ideas for getting started, suggestions in response to the statement "If you're doing this, try this instead," and lessons learned along the way. The book will foster authentic learning through integration of digital tools and emerging trends. Serve as a resource for emerging educators and those with varying levels of tech experience, helping them explore the use of different digital tools and concepts to prepare students for the future. Offer clear examples and narratives from students and other educators who have implemented some of the tools discussed, focusing on themes of empowered learning, innovative design, and student choice. Explore risks taken, failures experienced, and fun in working through the challenges, illustrating ways to weave established and emerging topics into curriculum. This accessible resource opens up a variety of learning experiences for students and illustrates how to implement different technologies into multiple content areas and grade levels. Audience: 6-12 educators.
