Strom, Tammy Mills, Linda Abrams, 2023-03-21 Despite the multifaceted complexity of teaching dominant perspectives conceptualize teacher development in linear dualistic transactional human centric ways The authors in this book offer non linear alternatives by drawing on a continuum of complex perspectives including CHAT complexity theory actor network theory indigenous studies rhizomatics and posthuman neomaterialisms The chapters included here illuminate how different ways of thinking can help us better examine how teachers learn relationally with human material and discursive elements and offer ways to understand the entangled nature of the relationship between that learning and what emerges in classroom instructional practice They also present situated illustrations of what those entanglements or assemblages look like in the preservice induction and inservice phases from early childhood to secondary settings and across multiple continents Authors provide evidence that research on teacher development should focus on process as much if not more than product and show that complexity perspectives can support forward thinking assets based pedagogies Methodologically the chapters encourage conceptual creativity and expansion and support an argument for blurring theory method and normalising methodological hybridity Ultimately this book provides conceptual theoretical and methodological tools to understand current educational conditions in late capitalism and imagine otherwise It was originally published as a special issue of the journal Professional Development in Education

Reimagining Climate Change Paul Wapner,Hilal Elver,2016-02-05

Responding to climate change has become an industry Governments corporations activist groups and others now devote billions of dollars to mitigation and adaptation and their efforts represent one of the most significant policy measures ever dedicated to a global challenge Despite its laudatory intent the response industry or Climate Inc is failing Reimagining Climate Change questions established categories routines and practices that presently constitute accepted solutions to tackling climate change and offers alternative routes forward It

does so by unleashing the political imagination. The chapters grasp the larger arc of collective experience, interpret its meaning for the choices we face, and creatively visualize alternative trajectories that can help us cognitively and emotionally enter into alternative climate futures. They probe the meaning and effectiveness of climate protection from below: forms of community and practice that are emerging in various locales around the world and that hold promise for greater collective resonance. They also question climate protection from above in the form of industrial and modernist orientations and examine large-scale agribusinesses as well as criticize the concept of resilience as it is presently being promoted as a response to climate change. This book will be of great interest to students and scholars of climate change, global environmental politics, and environmental studies in general, as well as climate change activists.
