EVALUATE	ELABORATE	EXPLAIN	EXPLORE	ENGAGE
Students perform a successful trial of at least 200 g, while verbally explaining the process. Journal write: What did I learn from this lab? How might I apply this past this lab?	On their posters, students identify where forces were applied and distributed, and how mechanical advantage was used in their trials (i.e. Input force v. Output force).	Students are given a sheet of butcher paper, and are asked to divide it half. One half should be devoted to a failed trial, one to a successful trial. Students draw detailed and labeled diagrams of both trials, and share with class. Instructor presents a short power point which presents the ideas of force and mechanical advantage, simple pulleys.	Students are given the following lab equipment: 1. Ring Stand and table clamp. 2. 2 m string. 3. Set of weights (2000 g total) 3. single and double pulley Challenge students to test their hypothesis by using their celery string to lift the most mass possible. Challenge students by having a minimum requirement of mass to be lifted - 200 g. Ask students: How will you use what is available to apply the greatest force without snapping your celery?	Students are given a long stalk of celery, and are asked to pull out one string from the stalk. Ask students to test the string's strength by giving it a quick pull on either end. Ask students to hypothesize just how much force one celery string can withhold.

Standard(s): 1C. Students know that when one object exerts a force on a second object, the second object always exerts a force of equal magnitude and in the opposite direction (Newton's third law).

1d. Students know how to apply the law $F=ma$ to solve one-dimensional motion problems that involve constant forces (Newton's second law).

Lucking, Frank A. Maffei, Robert F. Tamburro, Neal J. Thomas, 2012-04-10 This is the first comprehensive study guide covering all aspects of pediatric critical care medicine It fills a void that exists in learning resources currently available to pediatric critical care practitioners The major textbooks are excellent references but do not allow concise reading on specific topics and are not intended to act as both text and study guide There are also several handbooks available but these are usually written for general pediatric residents and lack the advanced physiology and pathophysiology required for the higher level

pediatric critical care practitioner **Student Study Guide and Solutions Manual for General Physics** Morton M. Sternheim, 1986 **Critical Care Study Guide** Gerard J. Criner, Gilbert E. D'Alonzo, 2013-03-09 Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states requiring extensive knowledge and clinical acumen are commonly found. Caring for critically ill patients requires an extensive knowledge of basic pathophysiology as well as awareness of the appropriate diagnostic tests and therapeutic interventions. Because this knowledge base crosses many different disciplines, introduction to caring for the intensive care patient while exciting may also be intimidating. This textbook is designed toward making the dynamic environment of the critical care unit understandable and the approach to the patient both logical and successful. The book contains three components: 1. description of the procedural tasks commonly performed for the critically ill patient; 2. explanation of the most common pathophysiologic states encountered; and 3. description of specific disease entities with details of their differential diagnosis, diagnostic strategy, and therapeutic plan. This book also uses several educational approaches that we have found useful in our own teaching sessions and prior textbooks. Clinical cases introduce chapters and highlight chapter segments to emphasize clinical relevancy. As an additional study aid, margin notes highlight important teaching points and facilitate easy review of chapter content. To consolidate the principles outlined in each chapter, review questions with full text explanations are provided at the end of each chapter. All these elements help reinforce the most important messages for the reader. **Physics, Study Guide** Sharon Ferrett, 1994-10
