reason that this book was first written By 1980 the microprocessor revolution had arrived As a result the microprocessor became a component of a system rather than a system itself and the need to understand the behaviour of the device became of even greater importance to the system designer New developments in mainframe computers were few with networks of minicomputers taking over their role in many instarices The 1980 revision of this book took into account the major advances in semiconductor technology that had occurred since it was first published in 1972 and included material relevant to the microprocessor   *Proceedings.
