

new Deluxe oscilloscopes, 25 or 40 MHz

These deluxe instruments not only give you accurate measurements, they include extra features that save you time and make them a pleasure to own. Identical in most respects, our new scopes provide more performance per dollar than you'll find elsewhere.

Important measurement features

You'll value the 1-millivolt-per-division sensitivity that lets you measure signals too small for 5 millivolt instruments, and the 10X horizontal magnifier that lets you expand signals twice as much as ordinary 5X magnifiers.

TV horizontal and vertical triggers let you look at TV waveforms that confuse less sophisticated trigger circuits, and the trigger holdoff function lets you achieve stable triggering on repetitive pulse trains. Use the A + B mode with B inverted to make differential measurements without ground reference, and the XY mode for Lissajou patterns.

Extras you may not find elsewhere

These scopes operate on 90-264 VAC, 50/60 Hz so they're at home anywhere in the world. Each includes a built-in component tester for in-and-out-of-circuit current vs. voltage testing of many different types of components. And a beam finder saves you time by forcing off-screen traces back on screen.

The deluxe handle makes carrying easy and doubles as a tilt bail for adjusting the viewing angle to suit your particular needs. Graticule illumination makes it easier to make measurements under low light conditions and is almost a necessity if you expect to record any of your measurements with an oscilloscope camera. And a built-in calibrator lets you check instrument accuracy and adjust the compensation of your probes. The SO-4554 even features 9kV accelerating potential for bright traces at higher sweep speeds.

These professional-looking instruments offer features you'll use and enjoy and a styling you'll be proud to display at the center of your workbench.
