Battery Installation and Battery Backup

The Lighting Control Panel is designed for 120VAC operation using the included DC power converter, but has the added feature of an onboard battery backup to prevent program memory loss. To install battery:

1. Remove battery cover on rear of housing by sliding cover down.
2. Install 9 volt battery (not included) according to polarity markings.
3. Close battery compartment by reversing the previous instructions.

Upon power failure, the battery backup will automatically shut down all non-essential functions. The display and keypad will not work. The battery backup will last in excess of 5 hours. When power is restored, the unit will restart the display and set all channels to the OFF position. All programming will be maintained unless the battery is depleted. If the battery is depleted, reprogramming of the time and automated functions will be required.

Note: If Lighting Control Panel will be disconnected from 120VAC power for a prolonged period of time, disconnect 9V battery connector from battery to prevent discharging of battery.

Installing 9 Volt Battery and DC Power Connector

It is recommended that the battery is replaced at least once a year. You might want to choose a date that will be easy to remember (i.e. Birthday, Anniversary, New Years, Daylight savings time changes, etc.).
