Mathematics 8th November 2013:

Hyperbolic Dynamics, Fluctuations and Large Deviations D. Dolgopyat, Y. Pesin, M. Pollicott, L. Stoyanov, 2015-04-01 This volume contains the proceedings of the semester long special program on Hyperbolic Dynamics Large Deviations and Fluctuations which was held from January to June 2013 at the Centre Interfacultaire Bernoulli of the Polytechnique Fédérale de Lausanne Switzerland. The broad theme of the program was the long term behavior of dynamical systems and their statistical behavior. During the last 50 years the statistical properties of dynamical systems of many different types have been the subject of extensive study in statistical mechanics and thermodynamics, ergodic and probability theories and some areas of mathematical physics. The results of this study have had a profound effect on many different areas in mathematics, physics, engineering and biology. The papers in this volume cover topics in large deviations and thermodynamics, formalism and limit theorems for dynamic systems. The material presented is primarily directed at researchers and graduate students in the very broad area of dynamical systems and ergodic theory but will also be of interest to researchers in related areas such as statistical physics, spectral theory and some aspects of number theory and geometry.

Advances in Applied Mathematics

Ali R. Ansari, 2014-08-04 This volume contains contributions from the Gulf International Conference in Applied Mathematics held at the Gulf University for Science Technology. The proceedings reflect the three major themes of the conference. The first of these was mathematical biology including a keynote address by Professor Philip Maini. The second theme was computational science/numerical analysis including a keynote address by Professor Grigori Shishkin. The conference also addressed more general applications topics with papers in business applications, fluid mechanics, optimization, scheduling problems and engineering applications as well as a keynote by Professor Ali Nayfeh.

Imagine Math 8

Michele Emmer, Marco Abate, 2022-09-07 This eighth volume of *Imagine Math* is different from all the previous ones. The reason is very clear: in the last two years the world changed and we still do not know what the world of tomorrow will look like. Difficult to make predictions. This volume has a subtitle *Dreaming Venice*. Venice, the dream city of dreams, that miraculous image of a city on water that resisted for hundreds of years, has become in the last two years truly unreachable. Many things tie this book to the previous ones. Once again this volume also starts like *Imagine Math 7* with a homage to the Italian artist Mimmo Paladino who created exclusively for the *Imagine Math 8* volume a new series of ten original and unique works of art dedicated to Piero della Francesca. Many artists, art historians, designers and musicians are involved in the new book including Linda D Henderson and Marco Pierini. Claudio Ambrosini and Davide Amodio Space also for comics and mathematics in a Disney key. Many applications from Origami to mathematical models for world hunger. Particular attention to classical and modern architecture with Tullia Iori. As usual the topics are treated in a way that is rigorous but captivating, detailed and full of evocations. This is an all embracing look at the world of mathematics and culture.
