

ANSWER KEY — Faraday's Electromagnetic Lab II: Pickup Coil, Transformer, and Generator

Answer the following questions on a separate sheet. The sim is available at phet.colorado.edu.

Part A: Pickup Coil

1. Run the PhET sim, "Faraday's Electromagnetic Lab." Maximize the window. Click the Pickup Coil tab. You should see a bar magnet, a compass needle grid, and a coil attached to a light bulb.

2. Describe the most effective way of using the magnet and the coil to light the bulb if

a. the coil cannot be moved.

Move the magnet in and out of the coil.

b. the magnet cannot be moved.

Move the coil over and off the magnet.

3. Rank the arrangements and motions shown below from most effective to least effective in terms of lighting the bulb, allowing for ties. For example, if A were most effective, B were least effective, and C and D were equivalent to one another, the ranking would be $A > C = D > B$.

$C > B > A = D$ [$C > B > D > A$ and $C > B > D > A$ are acceptable]

4. Move the bar magnet through the coil and observe the motion of the electrons in the forward arc of the coil loops. Report the correlations of magnet motion and electron motion.

a. Magnet approaches from the left, north pole first; electrons move downward.

b. Magnet departs to the right, south end last; electrons move upward.

c. Magnet approaches from the right, south pole first; electrons move **downward**.

d. Magnet departs to the left, north end last; electrons move **upward**.

Scientific and Technical Aerospace Reports, 1964 **Brain-powered Science** Thomas O'Brien, 2010

How can a long metal needle pass through a balloon without popping it? How can water flow at very different rates through two identical funnels? How can a stick placed on a table under several sheets of newspaper and extended over the edge of a table snap when quickly struck without lifting or tearing the paper? Author Thomas O'Brien takes these and 30 more science inquiry activities to a higher level in this book for educators who love to surprise and challenge their students with unanticipated results. Using experiments based on the science of a discrepant event—an experiment or demonstration in which the outcome is not what students expect—O'Brien shows how learners can be motivated to reconsider their preconceived notions and think more closely about what has actually occurred and the underlying scientific explanations. What makes this volume more valuable than a mere activity book is the addition of a science education component to the extensive science content found in each activity. Each discrepant event is shown to be analogous to a pedagogical principle. Speaking directly to teachers, O'Brien writes: "Your participation as teacher, as learner, as experimenter, rather than simply as a passive reader in these minds-on activities will lead you to question and help you to revise your implicit assumptions about the nature of science teaching and learning. At the same time, you will develop expertise with activities that you can use with your own students." The dual purpose activities thus allow you to unlock two doors with one key: the doors to your own learning and to your students' learning. The detailed analogies between the activities and science learning make the book an ideal resource for middle and high school teachers, science teacher educators, and their preservice students and professional development specialists alike. This thorough and thought-provoking text includes more than 200 up-to-date internet resources as well as extensions to each of the physical science, biology, and chemistry activities, bringing the total number of inquiry activities to nearly 120. Most important, the author reminds teachers that the study of science is full of surprises and should be both meaningful and fun for students.
