

## Chapter 8 Reading Guide – ANSWER KEY

- As a review, define the terms **autotroph** and **heterotroph**. Keep in mind that plants have mitochondria and chloroplasts and do both cellular respiration and photosynthesis! Autotrophs are able to sustain themselves without eating other living organisms or material derived from living organisms. Autotrophs make their own "food" through either photosynthesis (solar energy → glucose) or chemosynthesis (inorganic materials such as methane and hydrogen sulfide → organic molecules). Autotrophs are also known as producers. Heterotrophs must consume other organisms for energy. Decomposers (some bacteria and fungi) are considered heterotrophs.
- Draw a picture of a chloroplast and label the **stroma**, **thylakoid**, **thylakoid space**, **inner membrane**, and **outer membrane**.

- Use both chemical symbols and words to write out the formula for photosynthesis.  $6\text{CO}_2 + 6\text{H}_2\text{O} + \text{Light Energy} \rightarrow \text{C}_6\text{H}_{12}\text{O}_6 + 6\text{O}_2$ . Carbon dioxide reacts with water and energy from the sun to produce glucose and oxygen. Photosynthesis is another example of a redox reaction where carbon dioxide is reduced to glucose and water is oxidized to oxygen. The electrons increase in potential energy as they move from water to sugar (endergonic). The energy is provided by the sun.
- Photosynthesis is not a single process, but two processes, each with multiple steps.
  - Explain what occurs in the **light reactions** stage of photosynthesis. Be sure to use **NADP<sup>+</sup>** and **photophosphorylation** in your discussion. The light reactions occur in the thylakoid membranes of the chloroplasts. During the light reactions, water is split which provides a source of electrons and H<sup>+</sup> ions (protons). When water is split, oxygen gas is released as a byproduct. Light absorption by chlorophyll transfer electrons and H<sup>+</sup> to an electron carrier called NADP<sup>+</sup>. The light reactions also generate ATP, using chemiosmosis to power the addition of a phosphate to ADP. This is called photophosphorylation. At the end of the light reactions, light energy is converted into chemical energy store in ATP and NADPH. (No sugar yet!)
  - Explain the **Calvin cycle**, utilizing the term **carbon fixation** in your discussion. The Calvin cycle occurs in the stroma of the chloroplasts. The Calvin cycle begins with the incorporation of carbon dioxide from the air into organic molecules already present in the chloroplast. This is known as carbon fixation. The Calvin cycle then reduces the fixed carbon into carbohydrates by adding electrons provided NADPH. Chemical energy is supplied by ATP. The end result of the Calvin cycle is carbohydrate molecules called G3P which consist of 3 carbons each. G3P molecules are used to produce glucose.

**Ten Assessment Literacy Goals for School Leaders** Stephen Chappuis, Steve Chappuis, Susan M. Brookhart, Jan Chappuis, 2021-04-21 Of all school related factors that influence student learning only classroom instruction has greater impact than leadership And leaders have the greatest impact when they set direction citing that the goals and purpose they provide serves to strengthen and solidify the faculty The ten competencies for school leaders described in this book are based on a few factors First standards driven reform has created new knowledge requirements and responsibilities for school leaders In today s systems sorting students along a bell curve and artificially creating winners and losers has been replaced by a mission that all students must learn well Instead of a curriculum focused on what a teacher should teach the curriculum identifies what students must know and be able to do These standards are public and communicate what a state or district values when it comes to student learning Assessing the standards day to day not through large scale accountability tests or even local short cycle or common assessments is a requirement for effective standards based reform Second is the reward of improved student learning brought about by the use of classroom assessment for learning Assessment for learning has implications not just for school leaders but also for broader educational practice The research is conclusive and improved learning lies within the grasp of anyone wishing to apply it What does it look like when school leaders demonstrate mastery of the Ten Assessment Competencies Included in the book are examples learning activities and opportunities for practice as well as success indicators for each competency as leaders work toward mastery
