# Ten Principles of Good Prescribing

In modern healthcare, prescribing is the main way to treat and prevent disease. While medicines can enhance health, they all have the potential to cause harm if used inappropriately. We recommend that healthcare professionals who prescribe medicines should follow these ten principles, which underpin safe and effective use of medicines.

**All prescribers should:**

**1**

## **Be clear about the reasons for prescribing**

Establish an accurate diagnosis whenever possible (although this may often be difficult)

Be clear about how the patient is likely to benefit from the prescribed medicines

**2**

## **Take into account the patient's medication history before prescribing**

Obtain an accurate list of current and recent medications (including over the counter and alternative medicines), prior adverse drug reactions and drug allergies from the patient, their carers, or colleagues

**3**

## **Take into account other factors that might alter the benefits and risks of treatment**

Consider other individual factors that might influence the prescription (for example, physiological changes with age and pregnancy, or impaired kidney, liver, or heart function)

**4**

## **Take into account the patient's ideas, concerns, and expectations**

Aim to form a partnership with the patient when selecting treatments, making sure that they understand and agree with the reasons for taking the medicine

expenditure is out of pocket. Often this amounts to less than US \$2 per head per year. In contrast, high income countries spend only 8 to 15 per cent of health expenditure on medicines and this is mostly paid for by health insurance or social security funds. High income country expenditure may be over US \$400 per person per year. So managing the scanty resources available in low income countries becomes all the more important.

**Evaluating Pharmaceuticals for Health Policy and Reimbursement** Nick Freemantle, Suzanne Hill, 2008-04-15. The challenge in all settings is to make the difficult decisions in a way that is defensible, justifiable, ethical and equitable. So write Nick Freemantle and Suzanne Hill in their introduction to this important discussion on decision making in the reimbursement of pharmaceuticals. Based around a programme supported by the World Health Organization, chapters by leading academics involved in the research tackle such major issues as international pharmaceutical policy, tensions in licensing policies, priority setting and relationships between the stakeholders. Chapters include: Development of marketing authorisation procedures for pharmaceuticals; Interpreting clinical evidence; International pharmaceutical policy; Health creation or wealth creation; Development of fourth hurdle policies around the world; Economic modelling in drug reimbursement; Priority setting in health care; Matching decision criteria with policy objectives; Tensions in licensing and reimbursement decisions; Case of riluzole for amyotrophic lateral sclerosis; Relationship between stakeholders; Managing the war of words; Medicine and the media; Good information or misleading hype; How to promote quality use of cost effective medicines; Using economic evaluation to inform health policy and reimbursement; Making it happen and making it sustainable; Pricing of pharmaceuticals; Evaluating pharmaceuticals for health policy in low and middle income country settings. Besides the controversial issues, there is a wealth of practical information including economic modelling and the experiences from the WHO programme, providing readers with workable examples. This is essential reading for clinical researchers in pharmaceuticals and policy makers everywhere.

**Evidence-Based Pharmacy** Phil Wiffen, 2017-09-29. The effective delivery of primary care now requires a much higher calibre of staff than was previously considered acceptable. Selection, assessment and management are skills that need to be properly understood to ensure that the best possible service is being provided and inappropriate actions can lead employers into a legal minefield with unwelcome consequences. This manual provides concise but comprehensive information on the situation as applied to general practice, illustrated by numerous case studies.

**Guide to Good Prescribing** T. P. G. M. de Vries, 1995. This manual provides step by step guidance to rational prescribing and demonstrates that prescribing a drug is part of a process that includes many other components. Practical examples illustrate how to select, prescribe and monitor treatment and how to communicate effectively with patients.
