

8 STEPS TO PREVENT HEART DISEASE AND STROKE

These key factors can help you live a longer, healthier life and reduce your risk of heart disease and stroke. They're part of an overall healthy lifestyle and prevention approach you can build with your health care team (doctors, nurses, pharmacists and other professionals).

1. Know your risk

heart.org/cccccalculator

- If you're 40-75 years old and have never had a heart attack or stroke, use our Check. Change. Control. Calculator™ to estimate your risk of a cardiovascular event in the next 10 years.
- Certain factors can increase your risk, such as smoking, kidney disease or family history. Many risk factors can be improved with lifestyle changes.

2. Eat a healthy diet

heart.org/eatsmart

- Center your eating plan around vegetables, fruits, whole grains, legumes, nuts, plant-based proteins, lean animal proteins and fish.
- Limit sweetened drinks, refined carbohydrates, added sugars, processed meats, sodium and saturated fats. Avoid trans fat.

3. Be physically active

heart.org/movemore

- Adults should aim for at least 150 minutes of moderate-intensity aerobic activity or 75 minutes of vigorous activity each week.
- If you're already active, increase your intensity for more benefits.
- If you're not active now, get started by sitting less and moving more.

4. Watch your weight

heart.org/weight

- If you're overweight, lose weight by eating fewer calories and moving more.
- Check your body mass index (BMI) online or talk to your team about a healthy weight for you.

5. Live tobacco-free

heart.org/tobacco

- Don't smoke, vape or use tobacco products.
- If you don't think you can quit for good on your own, ask for help.
- Avoid secondhand smoke, too.

6. Manage conditions

heart.org/conditions

- Work closely with your health care team if you have high blood pressure (hypertension), high cholesterol, diabetes or other conditions that put you at greater risk.
- Many conditions can be prevented or managed by eating better, getting active, losing weight and not smoking.

7. Take your medicine

- Your doctor may prescribe statins or other medications to help control blood sugar, cholesterol, and blood pressure. Take all medications as directed.
- Don't take daily aspirin unless your doctor tells you to.

8. Be a team player

- Your health care team can help you build a prevention plan that works for you.
- Make decisions together. Ask questions.
- Talk about challenges in your life that may affect your health – like stress, sleep, mental health, family situations, tobacco use, food access, social support and more.

Take charge of your health.

Percutaneous and Non-fluoroscopic (PAN) Procedure for Structural Heart Disease Xiangbin Pan, Ziyad M. Hijazi, Horst Sievert, 2020-04-11. This book provides an extensive discussion of echocardiography-guided percutaneous interventional techniques for clinical practitioners including cardiologists, interventional physicians, surgeons, and specialist training candidates. It allows readers to gain a thorough understanding of interpreting echocardiography-guided procedures which not only protect patients from pain and other complications associated with conventional surgery but also obviate the use of fluoroscopy or contrast agents and so avoid radiation damage and the risks of allergy or renal function impairment. Further, these procedures could help to save patients in areas lacking medical resources. The book first demonstrates the substitution of transesophageal for transthoracic echocardiography to avoid intubation under general anesthesia and then presents key technical and practical aspects of echo-guided percutaneous interventions for structural heart diseases such as ASD, VSD, PDA, PS, MS, AS, and CoA. Lastly, it explores the lessons learned in echocardiography, anesthesia, and postprocedural management of echo-guided percutaneous interventions.

Aging and Heart Failure Bodh I. Jugdutt, 2014-02-19. This book synthesizes the major research advances in molecular, biochemical, and translational aspects of aging and heart failure over the last four decades and addresses future directions in management and drug discovery. It presents clinical issues and molecular mechanisms related to heart failure, including the changing demographics in the aging population with heart failure, hypertension, and prevention of diastolic heart failure in the aging population, polypharmacy, and adverse drug reactions in the aging population with heart failure. Changes in the heart that accompany advancing age, from humans to molecules, aging-associated alterations in myocardial inflammation and fibrosis, and aging-related changes in mitochondrial function and implications for heart failure therapy. The book succinctly summarizes the large volume of data on these key topics and highlights novel pathways that need to be explored. Featuring contributions from leading clinician-scientists, *Aging and Heart Failure: Mechanisms and Management* is an authoritative resource on the major clinical issues in heart failure therapy in the elderly for cardiologists, gerontologists, and internists.
