

Chapter 6: Humans in the Biosphere

State Standards

6.2 Analyze changes in population size and bio-diversity (speciation and extinction) that result from natural causes, changes in climate, human activity, and the introduction of invasive, non-native species.

Key Terms

Monoculture
Renewable Resources
Nonrenewable Resources
Sustainable Development
Agriculture
Industrial Development

Desertification
Deforestation
Pollutant
Biological Magnification
Smog
Acid Rain

Biodiversity
Ecosystem Diversity
Species Diversity
Genetic Diversity
Habitat Fragmentation
Ecological Hot Spot

You should be able to:

1. Describe human activities that can affect the biosphere.
2. Describe the relationship between resource use and sustainable development.
3. Describe how human activities affect soil and land resources.
4. Describe how human activities affect water resources.
5. Describe how human activities affect air resources.
6. Define biodiversity and explain its value.
7. Identify current threats to biodiversity.
8. Describe how biodiversity can be preserved.
9. Explain the concept of ecological footprint.
10. Identify the role of ecology in a sustainable future.

You should know the difference between:

- Renewable and nonrenewable resources
- Exponential and logistic growth
- Species diversity, Habitat Diversity, Biodiversity, and Genetic Diversity
- Sustainable and Unsustainable human activities (including examples)
- Density dependent and density independent factors (including examples)

Physical Geography: The Basics Joseph Holden, 2021-11-17 This second edition enhanced with more than 30 new figures provides an up to date overview of physical geography suitable for all those with a personal or professional interest in environmental processes climate change and understanding of the Earth's landforms and dynamics The text provides explanations of processes enabling the reader to understand the interconnected nature of the Earth's system and has been updated to include new developments and case studies with insights from satellite observations and data analysis using artificial intelligence The book begins by outlining the nature of the Earth system concepts around environmental thresholds and feedbacks planetary boundaries for human survival and humans as a dominant driver of environmental change The second chapter examines features associated with plate tectonics the role of weathering and erosion in shaping landscapes and soil functions and management Chapter 3 deals with the climate system

describing drivers of the major atmospheric and oceanic circulation systems the natural greenhouse effect and regional climate and weather experienced for different zones across the planet The global carbon cycle and long term climate change are considered in Chapter 4 before moving on to tackle the latest knowledge on contemporary and future climate change its impacts mitigation and adaptation Chapter 5 facilitates key understanding of hydrology river channel dynamics water quality coastal processes glacier dynamics and cold region landforms while Chapter 6 deals with the distribution and patterns of life on Earth and of the underlying processes that result in these patterns The book concludes with a brief overview of considerations for managing environmental change and hazards and requirements for achieving the UN s Sustainable Development Goals This reader friendly text brings together wide ranging subject areas from across physical geography covering the basics of the subject at a level suitable for those about to embark on a university degree or for those who just want to get a solid basic understanding of the physical environment around them The book which contains box features with examples and a glossary to aid understanding acts as a primer for further study or in itself can be used as a basic aid to understanding fundamental principles and processes associated with physical geography

Environmental Science

Michael L. McKinney, Robert M. Schoch, 2003 This edition provides a comprehensive overview and synthesis of current environmental issues and problems

The Ethics of Climate Change Byron Williston, 2023-08-24 The Ethics of Climate Change An Introduction systematically and comprehensively examines the ethical issues surrounding arguably the greatest threat now facing humanity This second edition has been updated and includes two new chapters on climate change and capitalism and climate change and law Williston addresses important questions such as Has humanity entered the Anthropocene epoch Is climate change primarily an ethical or an economic issue Can capitalism be reformed to prevent climate catastrophe What are the moral failings of international climate diplomacy What are the main causes of political inaction and climate denial Should tort law be used to sue those responsible for climate change What are intragenerational and intergenerational justice Is geoengineering an ethically justifiable response to climate change Featuring case studies throughout this textbook provides a philosophical introduction to an immensely topical issue studied by students within the fields of applied ethics global justice sustainability geography and politics

Systemic Management Charles W. Fowler, 2009-03-26 Systemic management describes a holistic objective and universally applicable form of management providing a framework for addressing environmental challenges such as global warming emergent diseases deforestation overpopulation the extinction crisis pollution over fishing and habitat destruction Its goals are the consistently sustainable relationships between humans and ecosystems between humans and other species and between humans and the biosphere This book presents a convincing argument that these goals and the means to achieve them can be inferred from empirical information It describes how comparisons between humans and other species reveal patterns that can serve to guide management toward true sustainability i e ways that are empirically observed to work in natural systems This objective

approach has rarely been possible in conventional management because sustainability is invariably undermined by conflicting human values. Systemic management is presented as a specialized process of pattern based decision making that avoids the inconsistency, subjectivity and error in current management practice. It clearly demonstrates how mimicking nature's empirical examples of sustainability can circumvent anthropocentric tendencies to overuse/misuse human values in management and illustrates the science best suited for achieving sustainability through examples of research that address specific management questions.

Indigenous Practice and Community-Led Climate Change Solutions Rani Muthukrishnan, Ranjan Datta, 2023-12-01. This book centers Indigenous knowledge and practice in community led climate change solutions. This book will be one of the first academic books to use the consciousness framework to examine and explain humans' situatedness and role in maintaining ecosystems' health. Drawing on teachings from the Indigenous Adi Shaiva community, the authors present up to date research on meanings and implications of South Asian traditional cosmic knowledge which focuses on relationality and spirituality connected to climate change. This knowledge can create innovative climate change solutions in areas including land/water traditional management, sustainability goals and expectations and state development projects. Overall, this book provides an innovative framework for nonviolent climate solutions which has its foundations in a traditional cosmic and consciousness based context. This book, which aims to bridge the gap between Indigenous and Western perspectives by re-educating researchers and decolonizing popular climate change solutions, will be of great interest to students and scholars studying climate change, conservation, environmental anthropology and Indigenous studies on a broader scale.

People and Environment Gareth Jones, 2014-06-11. *People and Physical Environment: A Global Approach* provides an introduction to the main areas of environmental concern for geographers, environmental scientists and planners at the beginning of the twenty first century. These include: Pollution of the atmosphere and its impact on our climate; The exploitation of the oceans; Management and supply of fresh water; Degradation of the land; and Biodiversity and the need to maintain genetic diversity. The book argues that our knowledge and understanding of the environment is now so great that we can predict with considerable accuracy where the skills of science and technology need to be focussed in order to prevent severe environmental damage from occurring. Achieving successful management of the environment has become dependent upon active participation of a society prepared to pay for a high quality of life and the willingness of our elected politicians to legislate and enforce the very highest standards of environmental management. This book will be essential reading for students of geography, environmental studies, science and land use planners and will also contribute valuable information for climatologists, biogeographers, hydrologists, land economists and forestry students.

Concepts of Biogeography & Astronomy Parent Lesson Planner, 2014-03-18. Concepts of Biogeography materials for each semester are independent of one another to allow flexibility. Semester 1: Biogeography. It has been said that our planet is really just an insignificant speck in a vast universe, but that's not true. In fact, the conditions for life found on Earth are supremely unique and make our life here

comfortable This despite the reality that the world around us is also tainted and in need of careful calibration to continue This book opens a window to the spectacular environments found on our planet from deserts to the tropics Researcher and biologist Dr Gary Parker brings his vast knowledge of ecology to a teaching setting exploring and explaining ecosystems population growth habitats adaptations energy problems and much more Learn about insect control in California why mammals have fur and how sharks maintain friendships with small fish known as remora Exploring the World Around You brings the varieties of our planet s habitats alive to the reader Semester 2 Astronomy Think you know all there is to know about our solar system You might be surprised at some of the amazing details that you find when you begin Exploring the World of Astronomy From the rugged surface of the moon to the distant and mysterious constellations this book provides an exciting educational tour for students of different ages and skill levels Learn about a blue moon the 400 year storm on Jupiter and what is meant by the zone of life Discussion ideas questions and research opportunities help expand this great resource on observational astronomy into an unforgettable educational course for middle school to high school students
