

To begin, inspect the window for the following:

- **A square opening**—Measure diagonally from corner to corner. For best results, diagonal lengths must be very similar. Record each diagonal measurement.

**1** Left to Right: \_\_\_\_\_  
Right to Left: \_\_\_\_\_

- **Window opening depth**—Measure between the inside to outside stop. Depending on window brand, you may be limited by the depth of this pocket. Record the depth.

Opening Depth: \_\_\_\_\_

Measure and record the width between the side jambs at the bottom, middle and top of the window. Raise the sash to take the measurements. If necessary, remove jamb liners and weatherstripping to get an accurate measurement. Record the smallest width. It is important to measure in all three places to be sure the opening is square.

**2** Smallest Width: \_\_\_\_\_

To determine the height of the new window, measure between the top of the sill, just behind the stool, and the underside of the head jamb. If necessary, remove the stops for accurate measurement.

**3** For picture windows, measure from the wood head jamb to the top of the stool (A). Then slide thin ruler behind stool (cut paint if needed) to measure stool height (B). Add the measurements together.

Just as you did with the width, take three measurements- one at each side and in the middle. Record the smallest height of the three.

Smallest Height: \_\_\_\_\_

**4** Record your measurements for each window and bring the sheets to your local Curtis Lumber. Your salesperson will help you to determine what window options are available for your dimensions.
