Juliet is a sociologist who wants to investigate if income affects happiness amongst doctors. This question asks you to review Juliet's methods and conclusions.

Juliet obtained a list of email addresses of doctors who work in her city. She contacted them and asked them to fill in an anonymous questionnaire. Participants were asked to state their annual income and to respond to a set of questions. The responses were used to determine a *happiness score* out of 100. Introduction to Probability and Statistics from a Bayesian Viewpoint, Part 1, Probability D. V.

Lindley, 1965-01-02 The two parts of this book treat probability and statistics as mathematical disciplines and with the same degree of rigour as is adopted for other branches of applied mathematics at the level of a British honours degree They contain the minimum information about these subjects that any honours graduate in mathematics ought to know They are written primarily for general mathematicians rather than for statistical specialists or for natural scientists who need to use statistics in their work No previous knowledge of probability or statistics is assumed though familiarity with calculus and linear algebra is required The first volume takes the theory of probability sufficiently far to be able to discuss the simpler random processes for example queueing theory and random walks The second volume deals with statistics the theory of making valid inferences from experimental data and includes an account of the methods of least squares and maximum likelihood it uses the results of the first volume
