

Acids Nomenclature**Worksheet # 1- Naming Binary Acids**

You will now learn to name and write formulas for acids. The first type of acid we will name is a binary acid. Recall that binary compounds contain two different elements. The cation in all acids is the hydrogen ion or H^{+1} .

All binary acids are named using the following rule: hydro_____ic acid. The name of the element goes in the blank. For example:

HCl would be hydrochloric acid

H₂S would be hydrosulfuric acid

Name the following acids.

Formula	Name	Formula	Name
HBr		H ₂ Se	
HI		HF	
H ₃ P		H ₂ Te	

When you write the formulas for acids you use the same method you used when writing the formula for compounds containing metals.

- First you write each symbol with the charge. (Remember that the cation will always be H^{+1})
- Next you switch the charges and make them subscripts. (Swap and Drop)

For example: hydroiodic acid $\rightarrow H^{+1}$ and I^{-1} becomes HI

hydrophosphoric acid $\rightarrow H^{+1}$ and P^{-3} becomes H₃P

Name	Symbol w/ Oxidation Number	Formula
hydrosulfuric acid		
hydrochloric acid		
hydroarsenic acid		
hydrofluoric acid		
hydrosodic acid		
hydrotelluric acid		

Naming Acids Packet
