

Hardware and Software

We have studied that computer is an electronic machine which can solve both arithmetical and logical problems according to the instructions given to it. It is a digital machine which completely depends upon the commands for its working. It understands machine language.

A computer is an electronic machine which accepts the data and instructions from the user as **Input** then processes the data according to the given instructions and finally gives out the desired result as **Output**. A computer completely depends on human-beings. It cannot do anything itself. It works according to the instructions given by the user.

Components of a Computer System

A computer system consists of **Hardware** and **Software**.

Hardware

All the physical parts of a computer are called hardware. They are further divided into many types depending on their function. These can be divided into Input device, Processing device, Output device and Storage device.

In addition there are other parts like wires, cables, switches, boxes etc. which also come under hardware.
