

Calculating a Subnet Mask

- Subnetting Example: To divide a large network into smaller subnets, follow this process:
 - Decide how many subnets you need. Each router interface connection indicates a required subnet.
 - Decide how many bits you need to meet or exceed the number of required subnets.
 - Use the formula 2^n , with n representing the number of bits you must reallocate from the host ID to the network ID.
 - The number of subnets you create is always a power of 2, so if you need 60 subnets, you must reallocate 6 bits ($2^6 = 64$) because reallocating 5 bits gives you only 32 subnets.
