

9. Volcanoes

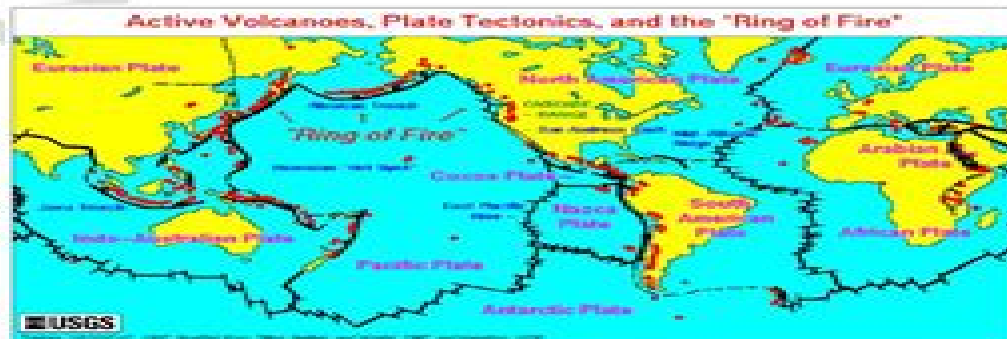

A volcano is a landform (usually a mountain) that opens downward to a pool of molten rock (**magma**) below the surface of the earth. As pressure in the molten rock builds up it needs to escape somewhere. So it forces its way up to the narrow cracks in the earth's crust. Once the magma erupts through the earth's surface it is called **lava**.

Did you know?

The name "volcano" has its origin from the name of Vulcan, a god of fire in Roman mythology.

There are around 1,510 'active' volcanoes in the world. We currently know of 80 or more which are under the oceans.
