Final Examination

Cell physiology

1. Gene expression and its role? Organs involved in gene expression.

_ **Gene expression:** Process from gene to protein (transcription -> translation -> protein modification)

+ **Transcription** (take place inside **nucleus**)

+ **Translation** (take place **cytosol**)

+ **Protein modification** (take place **endoplasmic reticulum**)

_ **Role:** produce **structural protein** (constructing new membrane and new protein components of organelles) and **functional protein** (go to the blood system and functions as hormone or enzymes)

2. Function of Organelles

_ **Plasma Membrane:** separating **intracellular fluid (ICF)** and **extracellular fluid (ECF)**, control movements of molecules into and out of cell.

_ **ER (Endoplasmic Reticulum):**

+ **Rough ER: protein synthesis** (mRNA moves to ribosome on rough ER to start Protein synthesis, creating functional protein + structure protein)

+ **Smooth ER: lipid synthesis**, serves as transport vesicle, store calcium (in some cell, smooth ER secretes lipid-derived steroid hormone.)

_ **Centrosome:** establish the **microtubules** for cell division (**gamma tubulin + alpha tubulin protein** on the surface of centrosome makes the microtubules)

+ If the microtubules are destroyed, cell division stops and gets stuck at metaphase.

_ **Mitochondria** -> **producing energy** in form of ATP for cell, the process of ATP production consisting of **3 phases**:

+ **Glycolysis** (taking place in **cytosol**) -> breaking down **ONE glucose** into **TWO PYRUVATES**
-> produce **2ATP**

British Medical Journal ,1929 **Higher Education Law** Steven G. Poskanzer,2003-05-01 Do we need to talk to our
lawyers about this What do the attorneys say Why didn t you get the lawyers involved before now Just about every
department chair and dean certainly every provost and president and an ever increasing number of faculty find themselves
asking or being asked such questions Dealing with issues ranging from academic freedom to job security and faculty
discipline lawyers legal requirements and lawsuits has become an established part of the apparatus of American higher
education Higher Education Law was written to help faculty and administrators navigate critical legal issues and avoid
potential legal pitfalls Drawing on his experience as university counsel administrator and teacher at a number of institutions
Steven G Poskanzer explains the law as it pertains to faculty activities both inside and outside the academy including faculty
roles as scholars teachers and members of institutional communities as well as employees and public citizens In each of these
areas he expands his discussion of cases and decisions to set out his own views both on the current status of the law and how
it is likely to evolve **Teaching Lab Science Courses Online** Linda Jeschofnig,Peter Jeschofnig,2011-02-02 Teaching Lab
Science Courses Online is a practical resource for educators developing and teaching fully online lab science courses First it
provides guidance for using learning management systems and other web 2 0 technologies such as video presentations
discussion boards Google apps Skype video web conferencing and social media networking Moreover it offers advice for
giving students the hands on wet laboratory experience they need to learn science effectively including the implications of
implementing various lab experiences such as computer simulations kitchen labs and commercially assembled at home lab
kits Finally the book reveals how to get administrative and faculty buy in for teaching science online and shows how to
negotiate internal politics and assess the budget implications of online science instruction **Active Learning in College
Science** Joel J. Mintzes,Emily M. Walter,2020-02-23 This book explores evidence based practice in college science teaching
It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman s 2014 challenge
seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book
we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include
practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our
intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek
models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach
undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses
and flagship research universities In keeping with Wieman s challenge our primary focus has been on identifying classroom

practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book s final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of na ve notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for
