A Compendium of Neuropsychological Tests Fourth Edition is one of the most well established reference texts in neuropsychology. This newly revised updated and expanded fourth edition provides a comprehensive overview of essential aspects of neuropsychological practice along with 100 test reviews of well known neuropsychological tests for adults. The aim of the Compendium is to provide a comprehensive yet practical overview of the state of the field while also summarizing the evidence on the theoretical background, norms, reliability and validity of commonly used neuropsychological tests. Based on extensive review of the clinical and research literature in neuropsychology, neurology and related disciplines, its comprehensive critical reviews of common neuropsychological tests and standardized scales include tests for premorbid estimation, dementia screening, IQ, attention, executive functioning, memory, language, visuospatial skills, sensory function, motor skills, performance validity and symptom validity. Tables within each test review summarize important features of each test, highlight aspects of each normative dataset and provide an overview of psychometric properties. This essential reference text also covers basic and advanced aspects of neuropsychological assessment with chapters on psychometric concepts and principles, reliability in neuropsychology, theoretical models of test validity and an overview of critical concepts pertaining to performance and symptom validity testing and malingering. Of interest to neuropsychologists, clinical psychologists, educational psychologists, neurologists and psychiatrists as well as trainees in these areas, this volume will aid practitioners in gaining a deeper understanding of fundamental assessment concepts in neuropsychology while also serving as an essential guidebook for selecting the right test for specific clinical situations and for helping clinicians make empirically supported test interpretations.
