corrosion is classified to two types uniform and localized corrosion Intervention in either in the alloy environment or in the alloy structure can provide the corrosion protection of metallic materials Furthermore the interference in the metal alloy environment can be conducted with the utilization of cathodic or anodic protection via the corresponding inhibitors Therefore the most common categorization is cathodic anodic and mixed type inhibitors taking into account which half reaction they suppress during corrosion phenomena The majority of the organic inhibitors are of mixed type and perform through chemisorption In order to update the field of the corrosion protection of metal and metal alloys with the use of organic inhibitors a Special Issue entitled Advances in Organic Corrosion Inhibitors and Protective Coatings is introduced This book gathers and reviews a collection of ten contributions nine articles and one review from authors from Europe Asia and Africa that were accepted for publication in this Special Issue of Applied Sciences *News Notes of California Libraries* California State Library,1914 Vols for 1971 include annual reports and statistical summaries **Industrial & Engineering Chemistry** ,1926 The Chartered Mechanical Engineer ,1958 **The Journal of Industrial and Engineering Chemistry** ,1915
