First-grade Students Using a Constructivist Approach Virginia Harder, 2019-05-31 Abstract Research on how 1st graders develop the concept of unit fractions using problem situations that has them construct their understanding Dissertation Discovery Company and University of Florida are dedicated to making scholarly works more discoverable and accessible throughout the world This dissertation Acquisition of Fraction Concepts One half and One fourth by First grade Students Using a Constructivist Approach by Virginia M Harder was obtained from University of Florida and is being sold with permission from the author A digital copy of this work may also be found in the university's institutional repository IR UF The content of this dissertation has not been altered in any way We have altered the formatting in order to facilitate the ease of printing and reading of the dissertation **Converting Fractions to Decimals Volume I - Math 5th Grade | Children's Fraction Books** Baby, Baby Professor, 2024-09 This is the first volume of workbook for fifth graders with focus on converting fractions to decimals Unlike science or history math requires activity This means that knowing the concepts is only a part of math learning You have to be able to apply the concepts in scenarios of varying difficulty too Go ahead and grab a copy today Math Mammoth Introduction to Fractions Maria Miller, 2024-04-02 Math Mammoth Introduction to Fractions contains lessons for fraction arithmetic for grades 1-4 This material does not include division or multiplication of fractions nor adding unlike fractions which are topics for 5th and 6th grades Also most of the material here is for 3rd and 4th grades and only a few lessons are meant for grades 1-2 The topics covered are on a simple level constantly illustrated with visual models and with small denominators The presentation avoids spelling out specific rules for manipulating fractions but instead relies on the usage of pictures on a very concrete level Children easily confuse the various rules for fraction arithmetic because there are so many There is a place for the rules as shortcuts for ideas that are already understood but we do not start with them The goal is to let the big ideas sink in conceptually first followed by some shortcuts The topics covered are one half and one fourth concept of a fraction concept of a mixed number comparing fractions equivalent fractions adding and subtracting like fractions adding and subtracting mixed numbers with like fractional parts adding one fraction that has tenths and another that has hundredths such as $\frac{3}{10}$ $\frac{7}{100}$ multiplying a fraction by a whole number The lessons are organized by topic not by increasing difficulty For reference 1st grade students study only the concept of one half and one fourth In 2nd grade they study the concept of a fraction and optionally the easiest first lesson on comparing fractions In 3rd grade students study the concept of a fraction fractions on a number line comparing fractions and equivalent fractions Then in 4th they study mixed numbers comparing fractions equivalent fractions adding and subtracting fractions and mixed

numbers and multiplying fractions by whole numbers The answers are appended
