

This air conditioner uses new refrigerant HFC (R410A).

- (1) **Refrigerant** may circulate in a tandem in the following manner:
 - (a) The refrigerant in the conventional refrigerant (R22) model acts, some of the piping and installation and service tools, and special (like the kable surface) 2 especially, when replacing a conventional refrigerant (R22) model with a new refrigerant (R404A) model, always replace the conventional piping and flare nuts with the R404A piping and flare nuts.
- (2) **Refrigerant** that uses refrigerant (R404A) have a different charging port thread diameter to prevent excessive charging with conventional refrigerant (R22) and for safety. Therefore, a check is required to be made when replacing a conventional refrigerant (R22) model with a new refrigerant (R404A) model.
- (3) The more careful that foreign matter (oil, water, etc.) does not enter the piping than with refrigerant (R22) models. Also, when storing the piping, securely seal the opening by pinching.
- (4) When changing the multistage, take into account the slight change in the composition of the gas and liquid phases, and always change from the liquid phase side when composition is

It is necessary to use stainless copper pipes and it is stated that the amount of residual oil is less than 40 mg/100m. Do not use copper pipes having a collapse, deformed or discoloured portion, especially on the interior surface. Other notes, that expansion, volume or capillary tubes may become

Thyroxine levels of copper pigs correlated with the fatness score as shown below (the correlation was not significant).

176. Do not use the following for **Right** piping and flow note:

- If the refrigerant is **not** an **azeotropic** mixture, the refrigerant cycle will be an **air** and water leakage. Input the **azeotropic** the specific for the **azeotropic** mixture.
- When installing and servicing the air conditioner, do not use gases other than the specified refrigerant (R410A) to enter the refrigerant cycle.
 - If an air-refrigerant gas mixture is the refrigerant cycle, the pressure inside the cycle will reach an abnormally high value.

1374 Furthermore, about twenty five years before the writing of *De generatione*, Thomas
 1375 Aquinas, (1225-1274), himself a follower of the ideas that were most consistent with
 1376 the neo-Platonist view, wrote various & striking analogies or metaphors to using
 1377 things as *instrumenta* for other purposes.
 1378 These early analogies, which were written down at about the same time as Aristotle's
 1379 *Metaphysics*, were written in a way that was very similar to the way that Aristotle
 1380 himself wrote in *Metaphysics*, and it is very likely that they were written by Aristotle
 1381 himself, or at least by someone who was very close to him.

When patients were first interviewed, it was clear that information contributed by the patient, the doctor, and the staff of the institution was going to be used in a different way than the information that the patient, the physician, and the hospital gave in the earlier studies. The patient, the doctor, and the hospital were asked to provide information about the patient's condition, the patient's treatment, and the patient's outcome.
