

# How GPS works

A GPS receiver, like the one in your smartphone, pinpoints its location on Earth's surface by analyzing its distance to three GPS satellites; a fourth satellite synchronizes clocks in the receiver and satellites.

## Trilateration

❶ If you know you are distance  $X$  from satellite 1, you could be anywhere on the circle (a sphere in three-dimensional space).

❷ If you also know you are distance  $Y$  from satellite 2, then you can only be at one of the two places where the circles intersect.

❸ If you also know you are distance  $Z$  from satellite 3, then there is only one place you can be: where the three circles intersect. A fourth satellite synchronizes time between satellite and receiver clocks.
