Under the Shadow of Nationalism Mariko Asano Tamanoi,1998-03-01 The contribution of rural women to the creation and expansion of the Japanese nation state is undeniable As early as the nineteenth century the women of central Japan s Nagano prefecture in particular provided abundant and cheap labor for a number of industries most notably the silk spinning industry Rural women from Nagano could also be found working from a very young age as nursemaids domestic servants and farm laborers In whatever capacity they worked these women became the objects of scrutiny and reform in a variety of nationalist discourses not only because of the importance of their labor to the nation but also because of their gender and domicile the countryside was the centerpiece of state ideology and practice before and during the war during the Occupation and beyond Under the Shadow of Nationalism explores the interconnectedness of nationalism and gender in the context of modern Japan It combines the author s long term field research with a painstaking examination of the documents behind these discourses produced at various levels of society from the national government records social reformers reports ethnographic data to the local teachers manuals labor activists accounts village newspapers It provides a wide ranging yet in depth look at a key group of Japanese women as national subjects through the critical chapters of Japanese modernity and postmodernity

Modeling, Analysis and Control of Hydraulic Actuator for Forging Xinjiang Lu,Minghui Huang,2017-12-30 This book describes load modeling approaches for complex work pieces and batch forgings and demonstrates analytical modeling and data driven modeling approaches for known and unknown complex forging processes It overcomes the current shortcomings of modeling analysis and control approaches presenting contributions in three major areas In the first several novel modeling approaches are proposed a process shape decomposition modeling method to help estimate the deformation force an online probabilistic learning machine for the modeling of batch forging processes and several data driven identification and modeling approaches for unknown forging processes under different work conditions The second area develops model based dynamic analysis methods to derive the conditions of stability and creep Lastly several novel intelligent control methods are proposed for complex forging processes One of the most serious problems in forging forming involves the inaccurate forging conditions velocity and position offered by the hydraulic actuator due to the complexity of both the deformation process of the metal work piece and the motion process of the hydraulic actuator The book summarizes the current weaknesses of modeling analysis and control approaches are summarized as follows a With the current modeling approaches it is difficult to model complex forging processes with unknown parameters as they only model the dynamics in local working areas but do not effectively model unknown nonlinear systems across multiple working areas further they do not take the batch forging process into account let alone its distribution modeling b All previous dynamic analysis studies simplify the forging system to having a single frequency pressure fluctuation and neglect the influences of non linear load force Further they fail to take the flow equation in both valves and cylinders into account c Conventional control approaches only consider the linear deformation force and pay no attention to sudden changes and the motion synchronization for the multi cylinder system making them less effective for complex nonlinear time varying forging processes subject to sudden changes

Pattern Analysis H. Niemann,2012-12-06 This book is devoted to pattern analysis that is the automatic construction of a symbolic description for a complex pattern like an image or connected speech Pattern analysis thus tries to simulate certain capabilities which go without saying in any human central nervous system The increasing interest and growing efforts at solving the problems related with pattern analysis are motivated by the challenge of the problem and the expected applications Potential applications are numerous and result from the fact that data can be gathered and stored by modern devices in ever increasing extent thus making the finding of particular interesting facts or events in these hosts of data an ever increasing problem It was tried to organize the book around one particular view of pattern analysis the view that pattern analysis requires an appropriate set of modules operating on a common data base which contains intermediate results of processing Although other views are

certainly possible this one was adopted because the author feels that it is a useful idea because the size of this book had to be kept within reasonable bounds and because it facilitated the composition of fairly self contained chapters
