Handbook of Business Communication Gerlinde Mautner, Franz Rainer, 2017-07-24 In spite of the day to day relevance of business communication it remains underrepresented in standard handbooks and textbooks on applied linguistics The present volume introduces readers to a wide variety of linguistic studies of business communication ranging from traditional LSP approaches to contemporary discourse based work and from the micro level of lexical choice to macro level questions of language policy and culture

Behind the Swap Andrew DeJoy, 2022-05-10 Andrew DeJoy's Behind the Swap offers a middle office perspective on the risks and miscommunications in post trade processing and provides a framework and solutions for a better approach In August of 2020 Citibank made one of the worst mistakes in banking history it accidentally sent out almost 900 million of its own funds Many of the recipients didn't give back the money Citibank sued And a federal court ruled that the recipients could keep the funds Citibank's error is not surprising The underlying contributors that led to the mistaken payment permeate the global financial services industry Manual data entry decades old technological infrastructure inadequate training and systems that can't interact with one another are just a few of the problems that face post trade processing the machinery behind financial markets Unfortunately years of neglect by regulators and financial institutions themselves has left this infrastructure needlessly complex astoundingly inefficient frequently inaccurate and woefully inadequate for modern financial markets The problems are easy to see but difficult to admit For financial institutions the current system costs billions of dollars each year in labor systems maintenance and lost funds For regulators the current system precludes the ability to track systemic risk It also artificially inflates the stability of the global financial system For lawyers and prosecutors the current system allows ample opportunity for unlawful misconduct such as rogue trading and fraud Andrew DeJoy's Behind the Swap examines the risks involved in post trade processing in swaps and derivative markets and provides solutions to better control those risks While Andrew doesn't claim to have all the answers he does believe there is a better system that is both achievable and necessary

Comprehensive Guide to IBPS Bank PO/ MT Preliminary & Main Exams with 4 Online CBTs (9th Edition) Disha Experts,2020-02-04 **High-dimensional Microarray Data Analysis** Shuichi Shinmura,2019-05-14 This book shows how to decompose high dimensional microarrays into small subspaces Small Matryoshkas SMs statistically analyze them and perform cancer gene diagnosis The information is useful for genetic experts anyone who analyzes genetic data and students to use as practical textbooks Discriminant analysis is the best approach for microarray consisting of normal and cancer classes Microarrays are linearly separable data LSD Fact 3 However because most linear discriminant function LDF cannot discriminate LSD theoretically and error rates are high no one had discovered Fact 3 until now Hard margin SVM H SVM and Revised IP OLDF RIP can find Fact3 easily LSD has the Matryoshka structure and is easily decomposed into many SMs Fact 4 Because all SMs are small samples and LSD statistical methods analyze SMs easily

However useful results cannot be obtained On the other hand H SVM and RIP can discriminate two classes in SM entirely RatioSV is the ratio of SV distance and discriminant range The maximum RatioSVs of six microarrays is over 11 67% This fact shows that SV separates two classes by window width 11 67% Such easy discrimination has been unresolved since 1970 The reason is revealed by facts presented here so this book can be read and enjoyed like a mystery novel Many studies point out that it is difficult to separate signal and noise in a high dimensional gene space However the definition of the signal is not clear Convincing evidence is presented that LSD is a signal Statistical analysis of the genes contained in the SM cannot provide useful information but it shows that the discriminant score DS discriminated by RIP or H SVM is easily LSD For example the Alon microarray has 2 000 genes which can be divided into 66 SMs If 66 DSs are used as variables the result is a 66 dimensional data These signal data can be analyzed to find malignancy indicators by principal component analysis and cluster analysis
