Measuring Motion continued

The average speed of the dog is:

errorage special
$$= \frac{\text{total distance weakless}}{\text{total times}} = \frac{7.m}{10 \text{ s}} = .07 \text{ m/s}$$

What Is Velocity?

Suppose that two birds leave the same tree at the same time. They both fly at 10 knyh for 5 min, then 5 knyh for 10 min. However, they don't end up in the same place. Why BACKSTON TO

The birds did not end up in the same place because they flew in different directions. Their speeds were the some, but because they flew in different directions, their velocities were different. Velocity is the speed of an object. and its direction. 60

The velocity of an object is constant as long as both. speed and direction are constant. If a bus driving at 15 m/s south specds up to 20 m/s south, its velocity changes. If the bus loveps moving at the same speed but charates direction from south to east, its velocity also changes. If the bus braices to a stop, the velocity of the bus official autorities.

The table below shows that velocity is a combination. of both the speed of an object and its direction.

Spend	Direction	Velocity
19. m/s	noneth.	It's results because the
20 m/h	Bolopith:	Diff: Hely's manually.
20 (9/3)	Field	300 mg/s event
0.165/51	ment	O'my's next

Velocity changes when the speed changes, when the direction charges, or when both speed and direction change. The table below describes various situations in which the velocity changes.

Situation	What changes
Raindrop falling faster and faster	
Burner going around a turn on a took.	direction
Car taking an exit off a highway	spreed and direction
Your arriving at a station	speed
Baseltall being caught by a catcher	spend
