

Let

E - event that none of the drawn cards is a club

Additionally define:

A_i - event that i -th drawn card isn't a club

The chained product rule will be:

$$\begin{aligned} P(E) &= P(A_1 \text{ and } A_2 \text{ and } A_3 \text{ and } A_4 \text{ and } A_5) = \\ &P(A_5|A_1 \text{ and } A_2 \text{ and } A_3 \text{ and } A_4) \cdot P(A_4|A_1 \text{ and } A_2 \text{ and } A_3) \cdot \\ &P(A_3|A_1 \text{ and } A_2) \cdot P(A_2|A_1) \cdot P(A_1) \quad (1) \end{aligned}$$

Now the probability that the first drawn card is not a club is the probability that one of 39 non-club cards are drawn out of 52 equally likely:

$$P(A_1) = \frac{39}{52}$$

Now given A_1 one non club card is removed from the deck and another card is drawn, it is not club if it is one of 38 non-club cards out of 51 remaining:

$$P(A_2|A_1) = \frac{38}{51}$$

Analogously:

$$\begin{aligned} P(A_3|A_1 \text{ and } A_2) &= \frac{37}{50} & P(A_4|A_1 \text{ and } A_2 \text{ and } A_3) &= \frac{36}{49} \\ P(A_5|A_1 \text{ and } A_2 \text{ and } A_3 \text{ and } A_4) &= \frac{35}{48} \end{aligned}$$

Now substitute all this into (1):

$$P(E) = \frac{39 \cdot 38 \cdot 37 \cdot 36}{52 \cdot 51 \cdot 50 \cdot 49} \approx 0.3038$$

The wanted probability is the probability of the complement - that at least one card is a club.

Using the formula for the probability of the complement:

$$P(\overline{E}) = 1 - P(E) \approx 1 - 0.3038 = 0.6962$$

using either demographic modeling techniques or statistical surveys that sample a fraction of residents. These estimates play a central role in vital decisions that range from funding allocations and rate setting to education, health, and housing provision. They also provide important data to companies undertaking market research. However, mastering small area and sub-national population estimation is complicated by scattered, incomplete, and outdated academic sources. An issue this volume tackles head on. Rapidly increasing population mobility is making inter-census estimation ever more important to strategic planners. This book will make the theory and techniques involved more accessible to anyone with an interest in developing or using population estimates. *Literacy Specialist, Fourth Edition* Rita M. Introduction to Statistical Process Control Peihua Qiu, 2013-10-14. A major tool for quality control and management, statistical process control (SPC) monitors sequential processes such as production lines and Internet traffic to ensure that they work stably and satisfactorily. Along with covering traditional methods, *Introduction to Statistical Process Control* describes many recent SPC methods that improve upon the more established techniques. The author, a leading researcher on SPC, shows how these methods can handle new applications. After exploring the role of SPC and other statistical methods in quality control and management, the book covers basic statistical concepts and methods useful in SPC. It then systematically describes traditional SPC charts, including the Shewhart, CUSUM, and EWMA charts, as well as recent control charts based on change point detection and fundamental multivariate SPC charts under the normality assumption. The text also introduces

novel univariate and multivariate control charts for cases when the normality assumption is invalid and discusses control charts for profile monitoring All computations in the examples are solved using R with R functions and datasets available for download on the author s website Offering a systematic description of both traditional and newer SPC methods this book is ideal as a primary textbook for a one semester course in disciplines concerned with process quality control such as statistics industrial and systems engineering and management sciences It can also be used as a supplemental textbook for courses on quality improvement and system management In addition the book provides researchers with many useful recent research results on SPC and gives quality control practitioners helpful guidelines on implementing up to date SPC techniques *The American Mathematical Monthly* ,1921 Includes section Recent publications **Exercises and Solutions in Statistical Theory** Lawrence L.
