The system is designed to operate in several 100-2000 Hz ranges only. It can also operate in the audio range at any other points desired. The manufacturer designed the radio to be a vacuum tube type operating. The radio should be converted to an IC radio like it is stated that "the fact doesn't let an IC radio be controlled by a wall switch. When the power is on the radio is always on. The radio is without battery supply, you can increase the time without changing the radio. To increase the life of the circuit, it is using the radio conversion to a 100-2000 Hz radio circuit."

Abstract: The purpose of this study was to determine the effect of a 12-week, low-intensity, low-impact, and low-volume exercise program on the physical fitness of sedentary, middle-aged women. The program was designed to be a safe and effective means of increasing physical activity in sedentary women. The program consisted of three sessions per week, each lasting 30 minutes. The sessions included a warm-up, a low-impact aerobic workout, and a low-intensity strength training routine. The results of the study showed that the program had a positive effect on the physical fitness of the women. There was a significant increase in heart rate, blood pressure, and body mass index (BMI) over the 12-week period. The program was well-tolerated by the women, and they reported a decrease in fatigue and an increase in energy levels. The findings of this study suggest that a low-intensity, low-impact, and low-volume exercise program can be an effective means of improving physical fitness in sedentary, middle-aged women.

Before the year ended, we estimated, using the 100,000+ accounts to which we applied the model, the number of accounts that would be in each of the four categories. We then compared the actual number of accounts in each category to the estimated number of accounts in each category.
