Types of Data

Quantitative - numerical data that can be measured

Qualitative - non-numerical data that cannot be measured

Discrete - data that can only take certain values

Continuous - data that can take any value within a range

Primary - data collected first-hand by the researcher

Secondary - data collected from existing sources

Population - the entire group of individuals being studied

Sample - a subset of the population

Sampling - the process of selecting a sample from a population

Random Sampling - every member of the population has an equal chance of being selected

Systematic Sampling - selecting every nth member of the population

Stratified Sampling - selecting members from different strata of the population

Cluster Sampling - selecting entire clusters of the population

Convenience Sampling - selecting members that are easy to reach

Measures of Central Tendency

Mean - the average of all the values

Median - the middle value when the data is ordered

Mode - the most frequent value

Range - the difference between the highest and lowest values

Interquartile Range - the range between the first and third quartiles

Standard Deviation - a measure of the spread of the data

Variance - the square of the standard deviation

Coefficient of Variation - a measure of the relative variability

Skewness - a measure of the asymmetry of the distribution

Kurtosis - a measure of the 'peakedness' of the distribution

Probability

Event - an outcome or set of outcomes

Sample Space - the set of all possible outcomes

Probability - the chance of an event occurring

Relative Frequency - the ratio of the number of times an event occurs to the number of trials

Theoretical Probability - the probability of an event occurring based on the structure of the sample space

Experimental Probability - the probability of an event occurring based on the results of an experiment

Compound Probability - the probability of two or more events occurring together

Conditional Probability - the probability of an event occurring given that another event has occurred

Independent Events - events that do not affect each other

Dependent Events - events that do affect each other

Measures of Dispersion

Range - the difference between the highest and lowest values

Interquartile Range - the range between the first and third quartiles

Standard Deviation - a measure of the spread of the data

Variance - the square of the standard deviation

Coefficient of Variation - a measure of the relative variability

Skewness - a measure of the asymmetry of the distribution

Kurtosis - a measure of the 'peakedness' of the distribution

Types of Test

Null Hypothesis - the hypothesis that there is no effect or no difference

Alternative Hypothesis - the hypothesis that there is an effect or a difference

Significance Level - the probability of rejecting the null hypothesis when it is true

P-value - the probability of obtaining the observed results, or more extreme results, if the null hypothesis is true

Confidence Interval - a range of values that is likely to contain the true value of the population parameter

Systematic Sampling

Definition - a method of selecting a sample from a population by choosing every nth member of the population

Advantages - easy to implement, ensures that the sample is spread across the population

Disadvantages - may introduce bias if there is a pattern in the population

Example - selecting every 10th person from a list of 1000 people

Simple Random Sampling

Definition - a method of selecting a sample from a population where every member has an equal chance of being selected

Advantages - unbiased, easy to implement

Disadvantages - may be time-consuming for large populations

Example - drawing names from a hat

Method	Advantages	Disadvantages
Simple Random Sampling	Unbiased, easy to implement	May be time-consuming for large populations
Systematic Sampling	Easy to implement, ensures spread	May introduce bias if there is a pattern
Stratified Sampling	Ensures representation of all groups	Requires knowledge of population structure
Cluster Sampling	Easy to implement for large areas	May introduce bias if clusters are not representative
Convenience Sampling	Easy to implement	Highly biased, not representative
