Designing Data Reports that Work Jenny Grant Rankin, 2016-03-02 Designing Data Reports that Work provides research based best practices for constructing effective data systems in schools and for designing reports that are relevant necessary and easily understood Clear and coherent data systems and data reports significantly improve educators data use and save educators time and frustration The strategies in this book will help those responsible for designing education data reports including school leaders administrators and educational technology vendors to create productive data reports individualized for each school or district This book breaks down the key concepts in creating and implementing data systems ensuring that you are a better partner with teachers and staff so they can work with and use data correctly and improve teaching and learning

How to Make Data Work Jenny Grant Rankin, 2016-01-22 Educators are increasingly responsible for using data to improve teaching and learning in their schools This helpful guide provides leaders with simple steps for facilitating accurate analysis and interpretation of data while avoiding common errors and pitfalls How to Make Data Work provides clear strategies for getting data into workable shape and creating an environment that supports understanding analysis and successful use of data no matter what data system or educational technology tools are in place in your district This accessible resource makes data easy to understand and use so that educators can better evaluate and maximize their systems to help their staff students and school succeed With this tried and true guidance you ll be prepared to advocate for tools that adhere to data reporting standards avoid misinterpretation of data and improve the data use climate in your school

**Handbook of Research on Educational Communications and Technology** J. Michael Spector, M. David Merrill, Jan Elen, M. J. Bishop, 2013-07-03 The 4th edition of the Handbook of Research on Educational Communications and Technology expands upon the previous 3 versions providing a comprehensive update on research pertaining to new and emerging educational technologies Chapters that are no longer pertinent have been eliminated in this edition with most chapters being completely rewritten expanded and updated Additionally new chapters pertaining to research methodologies in educational technology have been added due to expressed reader interest Each chapter now contains an extensive literature review documenting and explaining the most recent outstanding research including major findings and methodologies employed The Handbook authors continue to be international leaders in their respective fields the list is cross disciplinary by design and great effort was taken to invite authors outside of the traditional instructional design and technology community

Algebraic Geometry Dan Abramovich, 2009 Offers information on various technical tools from jet schemes and derived categories to algebraic stacks This book delves into the geometry of various moduli spaces including those of stable curves stable maps coherent sheaves and abelian varieties It describes various advances in higher dimensional bi rational geometry

**Simulation-based Optimization Of Antenna Arrays** Slawomir Koziel, Stanislav Ogurtsov, 2019-02-13 The book addresses surrogate assisted design of antenna arrays in particular how surrogate models both data driven and physics

based can be utilized to expedite procedures such as parametric optimization design closure statistical analysis or fault detection Algorithms and design frameworks are illustrated using a large variety of examples including real world printed circuit antenna and antenna array structures This unique compendium contains introductory materials concerning numerical optimization both conventional gradient based and derivative free including metaheuristics and surrogate based as well as a considerable selection of customized procedures developed specifically to handle antenna array problems Recommendations concerning practical aspects of surrogate assisted multi objective antenna optimization are also given The methods presented allow for cost efficient handling of antenna array design problems involving CPU intensive EM models in the context of design optimization and statistical analysis which will benefit both researchers designers and graduate students
