

Circles: Chords, Inscribed Angles and Arcs

Inscribed Angles

An Inscribed Angle is:

- An angle that has its vertex on the circle and sides that are chords.
- The measure of inscribed angle is one half of the measure of the intercepted arc.
 - ex: if the arc is 100° , then the inscribed angle is 50° degrees.
- The ratio between the measure of the arc is twice the measure of the inscribed angle forming it.
 - ex: if the inscribed angle is 40° , then the arc is 80° degrees.

Circles: Tangents and Secants

Tangents and Their Properties

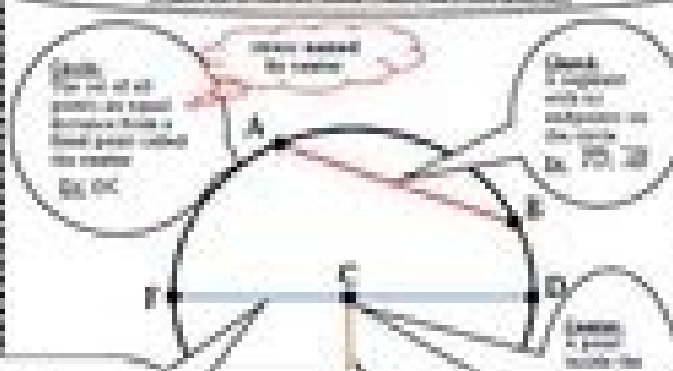

- Definition:** A line is tangent to a circle if it touches a circle at one point, the point of tangency.
- There are three important relationships between the radius and the tangent line.
 - If a line is tangent to a circle, then it is perpendicular to the radius at the point of tangency.
 - If a line is perpendicular to the radius at the point of tangency, then it is tangent to the circle.
 - If two segments from an external point to the circle are congruent.

Ex: If $\angle A$ is 90° , then $\angle B$ is 90° .

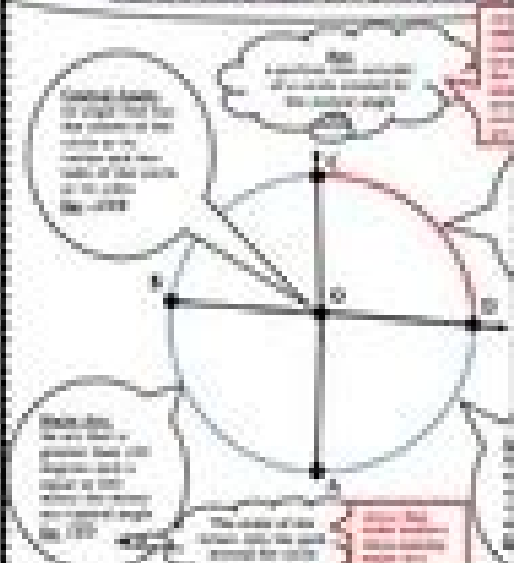

Circles: Parts, Circumference and Area - Notes

What is a circle and what are its parts?

Circles: Area, Arc Addition and Arc Length

What is a central angle? How does it relate to the arc it intercepts?

- Example: Find each of the following.
 - The central angle: 100° , 120° , 140°
 - The inscribed angle: 50° , 60°
 - The arc length: 100° , 120° , 140°

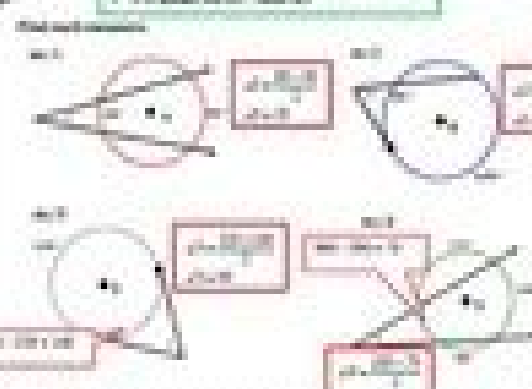

Intersecting Secants & Chords

If two secants intersect outside of a circle, then there are angles whose measure is related to the intercepted arcs.

- If two secants, a tangent and a secant, or two tangents intersect at the exterior of a circle, then the measure of the angle formed is one half the positive difference of the measures of the intercepted arcs.

Example: Find the measure of the angle formed by the secants.

The Arc Addition Postulate

Circle Arc Addition Postulate states:

- The measure of an arc formed by two adjacent arcs is the sum of the measures of the 2 arcs.

Example: The measure of arc ABC is 100° and the measure of arc BCD is 120° . Find the measure of arc ADC.

$$100 + 120 = 220$$

So the measure of arc ADC is 220° .

Example: Find each measure.

$$m\angle A = 100^\circ \quad m\angle B = 120^\circ$$

$$100 + 120 = 220$$

So the measure of arc ADC is 220° .

Example: Find each measure.

$$m\angle A = 100^\circ \quad m\angle B = 120^\circ$$

$$100 + 120 = 220$$

So the measure of arc ADC is 220° .

Example: Find each measure.

$$m\angle A = 100^\circ \quad m\angle B = 120^\circ$$

$$100 + 120 = 220$$

Geometry Final Exam Review Circle Answer

Tobias Bleicker

A red circular graphic, possibly a stylized arrow or a decorative element, is positioned to the right of the author's name.

Geometry Final Exam Review Circle Answer:

Eventually, you will unconditionally discover a new experience and talent by spending more cash. nevertheless when? do you resign yourself to that you require to acquire those all needs afterward having significantly cash? Why dont you try to get something basic in the beginning? Thats something that will lead you to comprehend even more all but the globe, experience, some places, as soon as history, amusement, and a lot more?

It is your certainly own epoch to show reviewing habit. in the midst of guides you could enjoy now is **Geometry Final Exam Review Circle Answer** below.
