researchers and academicians **Intelligence in Communication Systems** Finn Arve Aagesen, Chutiporn Anutariya, Vilas Wuwongse, 2004-11-03 The 2004 IFIP International Conference on Intelligence in Communication Systems INTELLCOMM2004 held in Bangkok Thailand 23-26 November 2004 was the successor and an expansion of SMARTNET a series of annual conferences on intelligence in networks held during 1995-2003 under the auspices of IFIP TC6's Working Group 6.7 The Internet and Web provide more connection facilities hence the man-machine and machine-machine interactions will increase and communication will have an important role in modern systems. In order to obtain effective and efficient communication artistic social and technical issues have to be tackled in a holistic and integrated manner. However communication techniques concepts and solutions which have been developed so far treat these issues separately so that there arises a need for communication researchers and practitioners in different fields engineering science and arts to meet share their experience and explore all possibilities of developing integrated and advanced solutions which incorporate ideas from such disciplines as communication arts art design linguistics Web technologies computer system architecture and protocols computer science and artificial intelligence. INTELLCOMM 2004 was jointly sponsored by IFIP WG 6.7 Smart Networks and WG 6.4 Internet Applications Engineering and aimed to provide an international forum which brings academia researchers practitioners and service providers together. The discussion areas covered the latest research topics and advanced technological solutions in the area of intelligence in communication systems ranging from architectures for adaptable networks services and Semantic Web Web service technologies to intelligent service application interface and intelligent human interaction. INTELLCOMM 2004 received 112 paper submissions from 28 countries. From these 24 were accepted and are included in this proceedings. There were also 3 papers accepted for poster presentation published separately.

Cooperating Embedded Systems and Wireless Sensor Networks Michel Banatre, Pedro Jose Marron, Anibal Ollero, Adam Wolisz, 2010-01-05 A number of different system concepts have become apparent in the broader context of embedded systems over the past few years. Whilst there are some differences between these this book argues that in fact there is much they share in common particularly the important notions of control heterogeneity wireless communication dynamics ad hoc nature and cost. The first part of the book covers cooperating object applications and the currently available application scenarios such as control and automation healthcare and security and surveillance. The second part discusses paradigms for algorithms and interactions. The third part covers various types of vertical system functions including data aggregation resource management and time synchronization. The fourth part outlines system architecture and programming models outlining all currently available architectural models and middleware approaches that can be used to abstract the complexity of cooperating object technology. Finally the book concludes with a discussion of the trends guiding current research and gives suggestions as to possible future developments and how various shortcomings in the technology can be overcome.
