

INTRAMUSCULAR MEDICATION ADMINISTRATION

IM Administration Sites

Deltoid	Vastus lateralis and rectus femoris	Dorsogluteal	Ventrogluteal
---------	-------------------------------------	--------------	---------------

Site should be selected based on client's body type.
Avoid injecting into burns, infections, or other skin lesions.

Most common:

- Adult clients: deltoid
- Pediatric clients: vastus lateralis

Syringe Selection

1–3 mL syringe should be used depending on amount of medication to be injected.

Needle Selection

Needle gauge Thickness of the needle	Needle length Length in inches
25 24 23	1/2 1 1 1/2

Gauge: The higher the gauge, the lower the diameter. The larger the diameter, the faster the medication will be administered. Consider amount of medication to be delivered when choosing gauge. 23–25 gauges are most common.

Length: Clients with more subcutaneous fat may need a longer needle length based on administration site. The most commonly used lengths are 1/2 inch for pediatric clients and 1 inch for adults.

Blunt Fill vs. Blunt Filter Needles

Blunt fill needles: used for drawing medicines out of any sealed container

Blunt filter needles: have an extra filter, which filters out solid particles from the liquid; use with any medication in a glass ampule or medications mixed from powdered form

Never inject client with the same needle used to draw up medication.

Procedure

1. Verify medication using seven Rights of Administration.
2. Draw up medication using filter or blunt tip needle.
3. Detach filter or blunt tip needle, replace cover, apply injection needle to syringe.

Supplies
