NOTICE

1 – Activate the Batteries

The timer comes with two LR44 batteries installed.

1. Remove the pull tab to connect the installed batteries.
2. The display will initialize itself, then flash "12:00 AM" in the **CLOCK** mode (Fig. 1).

Fig. 1

NOTE: If display doesn't light, the batteries are dead. Replace the batteries before using the digital timer.

2 – Get Familiar with the Timer's Features

1. Battery Holder (back of unit) — two LR44 batteries keep time up to three months without power
2. Low Battery Indicator — programmed data is stored in non-volatile memory, so it won't be lost when batteries are removed
NOTE: Replace the batteries as soon as possible after the low battery indicator appears.
3. Time Of Day (TOD) Display — the timer will automatically adjust for Daylight Saving Time (DST) and changing dawn and dusk times for your location (Astronomic feature)
4. Pushbuttons
5. Two Timed, Grounded Outlets
6. Selector Knob
7. Reset Button

Fig. 2

8. Day Of Week (DOW) Display — events can be programmed for just one day of the week, all the days of the week, just weekdays or just weekends
9. Event Display — the timer can be programmed for up to 28 total ON/OFF events per week
10. Mode Display — the timer can display several modes during setup and programming and three modes during operation: **MANUAL**, **AUTO** and **RANDOM**. **MANUAL** allows for manual operation of the plugged-in devices, **AUTO** uses the timer's exact settings and **RANDOM** uses the timer's settings varied by random 5-minute increments of ± 30 minutes.
11. Output Status Indicator — this is the ON/OFF indicator. When the green light is on it means that the lamp or appliance should be on. If it is not on, the bulb may be burned out or the device may be turned off at the lamp or appliance.

NOTE: You may set up and program the timer before you plug it in. Be aware that while it is unplugged, the display will turn off to conserve battery power if there is no pushbutton activity for a few minutes. If this happens, simply push any button to turn the display back on.

3 – Clear Any Existing Programming

It's unlikely that your new digital timer has any existing programming, but to make sure, use this procedure before setting the time.

1. Locate the Reset button. It is the small, round hole adjacent to the keypad. You will need a pen or paper clip to press this button.
2. Press and hold the **ON/OFF** button.
3. Press the Reset button for 3 seconds and release. The display will light up and then go blank.
4. Release the **ON/OFF** button.

NOTE: Pressing the Reset button without holding down the **ON/OFF** button will clear the time, but will not clear the non-volatile (programming) memory.

4 – Set the Time, Date and Location

NOTE: The following procedure must be completed entirely, including adjustments, in order for the Astronomic and automatic Daylight Saving Time features to function properly.

Setting Time

1. Ensure that the timer is in the **CLOCK** mode (Fig. 1). If it is not, press the **MODE** button a few times (through **MANUAL**, **AUTO** and **RANDOM**) until **CLOCK** shows in the mode display area, then press **OK**.
2. Turn the selector knob until the correct hour shows in the first two digits of the Time Of Day (TOD) display, along with the correct **AM** and **PM** display. Note that the **AM** and **PM** displays will alternate as the time passes through 12.
3. Press the **OK** button to set the hour. The last two digits of the TOD display (minute display) will begin to flash.
4. Turn the selector knob until the correct time in minutes shows.
5. Press the **OK** button to set the minutes. **MONTH**, **DATE** and **YEAR** will show in the mode display area, with the digits under **YEAR** flashing (Fig. 3).
