Lloyd,2006 The hypothesis of

this research was that by stretching microfiltration or ultrafiltration membranes their performance in terms of flux and rejection could be improved Stretching a membrane was envisioned to stretch its pores or change the aspect ratio of the pores It was thought that changing the aspect ratio could lead to improved flux by increasing the pore area while also improving the rejection of particles by decreasing the length of the minor axis The objective of this research was to study the effects of uniaxial stretching of microporous membranes and thereby change the aspect ratio on their performance measured in terms of flux and particle rejection
