

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- 1) Circles are females and squares are males.
- 2) A shaded circle or square indicates that a person has the trait.

The pedigree chart below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of person 1 - 15. Then answer the questions below the table.

What do you know about the genotype of the mother of 1?

These parents (1) had a color blind son (2). His dad is a carrier, but color blind. When he is mated with a normal female, the mother is not shaded, she must be a carrier.

Number 1 is color blind, just like her father. Where could she get her allele for color blindness?

She inherited her allele for color blindness from her mother. Must have been a carrier. If color blind, from her father.

Number number 1 and 2 were color blind. How did they have a color blind son (3)?

Both mother and father are carriers for color blindness.

What must be the genotype of the parents of a color blind daughter (4)?

To have a color blind daughter, she must have the recessive allele from each parent. Her father must be $X^b Y$ and mother must have to be $X^B X^b$ or $X^b X^b$.

If number 1 is mated a normal male, what is the probability that their sons will be color blind?

$X^B X^B \times X^B Y \rightarrow$ all of their sons will not be color blind.

$X^B X^b \times X^B Y \rightarrow$ (normal male)
