

- In developing nations, a larger amount is utilized for irrigation and agriculture.
- In industrialized nations, a larger amount is applied to industry.
- In wealthy nations, a larger amount is used to produce power.

Q(iv): Suggest reasons for the variation in the use of water between developed and developing countries?

Ans: The explanations for the variances in water consumption proposed in part iii should be included in the answers. If a candidate develops a point well, they may receive more than one mark for that point. Possible explanations comprise:

- In emerging nations, where the population is increasingly reliant on the land, a larger amount is utilized for irrigation and agriculture.
- Developed nations have more factories than developing nations; hence a higher percentage is used for manufacturing in such nations.
- Due to its usage for cooling in thermal power plants, a bigger amount is employed to generate electricity in industrialized nations.
- Because wealthy nations consume more electricity overall and at home to power a wide variety of electrical appliances (such as computers, TVs, and refrigerators), as well as more specifically outside the home for street lighting or to provide amenities like air conditioning in the numerous shops and offices, developed nations use a greater proportion of it for electricity generation.

Q(b): Study Fig. 10 which shows areas of the world which have more water than they need (a surplus) and those where there is a shortage.
