Martha Stone Wiske, Lisa Breit, 2013-12-23 *Teaching for Understanding with Technology* shows how teachers can maximize the potential of new technologies to advance student learning and achievement. It uses the popular Teaching for Understanding framework that guides learners to think, analyze, solve problems and make meaning of what they've learned. The book offers advice on tapping into a rich array of new technologies such as web information, online curricular information and professional networks to research teaching topics, set learning goals, create innovative lesson plans, assess student understanding and develop communities of learners.

Assessing Writing Across the Curriculum Charles R. Duke, Rebecca Sanchez, 2001 *Assessing Writing Across the Curriculum* offers guidelines for effective assessment of student writing performance in various content areas such as English, science, mathematics and social studies at the junior or senior high school level. The book suggests a change in teaching methodology in order to make writing a key part of the instructional process. Written by teachers, it offers examples of applications and tools for assessment, concluding with a list of additional resources for further research. *Assessing Writing Across the Curriculum* addresses issues such as assignment design, communication of expectations, scoring rubric design and student involvement in writing assessment. It emphasizes writing to learn versus writing to test. This change in emphasis allows the student to understand how writing can contribute to his or her thinking and learning about a subject. The book utilizes the knowledge editors Duke and Sanchez have accumulated in directing National Writing Project sites and in their extensive in-service work on writing assessment with teachers.

Mathematical Modelling Programs in Latin America Milton Rosa, Francisco Cordero, Daniel Clark Orey, Pablo Carranza, 2022-07-06 This book is about the unique, sophisticated and rigorous study of mathematics in Latin America developed over centuries of cultural exchange between Europe, North and South America. More specifically, the book explores the tradition of mathematical modelling introduced a century ago. This modelling was adapted to assist members of distinct communities to draw information about their own realities through the elaboration of representations which generate mathematical knowledge that deals with creativity and invention. The book provides empirical evidence that a category of

mathematical modelling developed in Latin America assesses the horizontal and reciprocal relations between mathematics school non school contexts and the real world These relations provide an epistemological and ontological change where mathematical knowledge of the others is recognized on a horizontal plane Further they oblige mathematics teachers and students to understand as a community of knowledge that builds their own mathematical categories of their environment governed by the reciprocal relationships between academic knowledge and functional knowledge The dimensions of the relationships make up a frame of reference that guides educational change in mathematics The book presents an inquiry based approach of three Latin American modelling programs ethnomodelling transversality of knowledge and reasoned decision making Each one with its respective theoretical and methodological foundations related to ethnomathematics and mathematical modelling socioepistemology and the attribution of meaning to learning Undoubtedly the three mathematical modelling programs independently provide educational gains each with its levels of specificity and loyal to its philosophical theoretical and methodological principles However the book places them together organized by axes to define a corpus of mathematical knowledge that envisions profound educational change through the development of different approaches of mathematical modelling The authors of the 18 chapters in this book who represent the diversity of Latin America are from eight countries Argentina Brazil Chile Colombia Costa Rica Cuba Ecuador Honduras and Mexico They were invited to share their ideas perspectives and discuss investigations that represent a rich sample of three Latin American perspectives on mathematical modelling
