Polking, 1995 Handbook of Computational Finance Jin-Chuan Duan, Wolfgang Karl Härdle, James E. Gentle, 2011-10-25 Any financial asset that is openly traded has a market price Except for extreme market conditions market price may be more or less than a fair value Fair value is likely to be some complicated function of the current intrinsic value of tangible or intangible assets underlying the claim and our assessment of the characteristics of the underlying assets with respect to the expected rate of growth future dividends volatility and other relevant market factors Some of these factors that affect the price can be measured at the time of a transaction with reasonably high accuracy Most factors however relate to expectations about the future and to subjective issues such as current management corporate policies and market environment that could affect the future financial performance of the underlying assets Models are thus needed to describe the stochastic factors and environment and their implementations inevitably require computational finance tools *Advances in Neural Networks - ISSN 2007* Derong Liu, 2007 Annotation The three volume set LNCS 4491 4492 4493 constitutes the refereed proceedings of the 4th International Symposium on Neural Networks ISSN 2007 held in Nanjing

Experiments in Modern Physics Adrian C. Melissinos, Jim Napolitano, 2003-03-17 A revision of the leading text on experimental physics The feature of this book that has made it one of the most loved texts on the subject is that it goes far beyond a mere description of key experiments in physics The author

successfully provides the reader with an understanding and appreciation of the physics behind the experiments The second edition will be an extensive revision introducing many new devices including the use of computers and software programs that have come into use since the publication of the first edition In addition the important areas of condensed matter physics and optical physics will be added including two entirely new chapters on lasers and optics Modern analysis and acquisition techniques Integration with matlab for data analysis and display New experiments include fundamentals of lasers

An Introduction to High-performance Scientific Computing, 1996 Designed for undergraduates An Introduction to High Performance Scientific Computing assumes a basic knowledge of numerical computation and proficiency in Fortran or C programming and can be used in any science computer science applied mathematics or engineering department or by practicing scientists and engineers especially those associated with one of the national laboratories or supercomputer centers This text evolved from a new curriculum in scientific computing that was developed to teach undergraduate science and engineering majors how to use high performance computing systems supercomputers in scientific and engineering applications Designed for undergraduates An Introduction to High Performance Scientific Computing assumes a basic knowledge of numerical computation and proficiency in Fortran or C programming and can be used in any science computer science applied mathematics or engineering department or by practicing scientists and engineers especially those associated with one of the national laboratories or supercomputer centers The authors begin with a survey of scientific computing and then provide a review of background numerical analysis IEEE arithmetic Unix Fortran and tools elements of MATLAB IDL AVS Next full coverage is given to scientific visualization and to the architectures scientific workstations and vector and parallel supercomputers and performance evaluation needed to solve large scale problems The concluding section on applications includes three problems molecular dynamics advection and computerized tomography that illustrate the challenge of solving problems on a variety of computer architectures as well as the suitability of a particular architecture to solving a particular problem Finally since this can only be a hands on course with extensive programming and experimentation with a variety of architectures and programming paradigms the authors have provided a laboratory manual and supporting software via anonymous ftp Scientific and Engineering Computation series

Identification of Power Plant Processes - Theory and Application Roland Kulesky, Gregory Nudelman, 2015-08-31 The book presents non standard approaches and algorithms for design tuning and modeling of power plant control systems in the environment of Matlab and its Toolboxes The topic at hand is the identification of transfer functions of Single Input Single Output SISO controlled processes which may be described as dynamical links with self regulating or integrating or differentiating properties Within a framework of a single procedure the nominal transfer function of the power process and the transfer functions uncertainties are identified creating a basis for a robust approach This textbook provides the necessary tools guidance and support for understanding and effective use of the modern methods of identification in the design tuning and

optimization of power plant control systems It can also serve as a theoretical background for creating software for these purposes *CAEN Newsletter* University of Michigan. Computer Aided Engineering Network,1992 *Advances in Control Education* 1991 G.F. Franklin,M.J. Rabins,N.A. Kheir,2014-05-23 This volume is the published proceedings of selected papers from the IFAC Symposium Boston Massachusetts 24 25 June 1991 where a forum was provided for the discussion of the latest advances and techniques in the education of control and systems engineers Emerging technologies in this field neural networks fuzzy logic and symbolic computation are incorporated in the papers Containing 35 papers these proceedings provide a valuable reference source for anyone lecturing in this area with many practical applications included *Advances in Asset Management and Condition Monitoring* Andrew Ball,Len Gelman,B. K. N. Rao,2020-08-27 This book gathers select contributions from the 32nd International Congress and Exhibition on Condition Monitoring and Diagnostic Engineering Management COMADEM 2019 held at the University of Huddersfield UK in September 2019 and jointly organized by the University of Huddersfield and COMADEM International The aim of the Congress was to promote awareness of the rapidly emerging interdisciplinary areas of condition monitoring and diagnostic engineering management The contents discuss the latest tools and techniques in the multidisciplinary field of performance monitoring root cause failure modes analysis failure diagnosis prognosis and proactive management of industrial systems There is a special focus on digitally enabled asset management and covers several topics such as condition monitoring maintenance structural health monitoring non destructive testing and other allied areas Bringing together expert contributions from academia and industry this book will be a valuable resource for those interested in latest condition monitoring and asset management techniques **Digital Signal Processing in Power Electronics Control Circuits** Krzysztof Sozański,2013-07-03 Many digital control circuits in current literature are described using analog transmittance This may not always be acceptable especially if the sampling frequency and power transistor switching frequencies are close to the band of interest Therefore a digital circuit is considered as a digital controller rather than an analog circuit This helps to avoid errors and instability in high frequency components Digital Signal Processing in Power Electronics Control Circuits covers problems concerning the design and realization of digital control algorithms for power electronics circuits using digital signal processing DSP methods This book bridges the gap between power electronics and DSP The following realizations of digital control circuits are considered digital signal processors microprocessors microcontrollers programmable digital circuits Discussed in this book is signal processing starting from analog signal acquisition through its conversion to digital form methods of its filtration and separation and ending with pulse control of output power transistors The book is focused on two applications for the considered methods of digital signal processing an active power filter and a digital class D power amplifier The major benefit to readers is the acquisition of specific knowledge concerning discussions on the processing of signals from voltage or current sensors using a digital signal processor and to the signals controlling the output inverter transistors Included are

some Matlab examples for illustration of the considered problems
