## What molecules make up a membrane?

Directions: Remember to answer the following questions using a *different color font*.

### Why?

Imagine your bedroom without closets, drawers, shelves, bags or boxes—just a room with a bed. Where would your stuff be? Would you be able to find the things you needed? How efficiently could you get ready for school in the morning? Would all of your school items be together when you sat down to study? The compartments you use in your room—the closet, drawers, etc.—help you organize items by category so that all the items you need to get dressed are in one place. All the items you need for studying are in another place. This compartmentalization improves efficiency. Cells also need organization to improve efficiency. The compartmentalization of cells is achieved by dividing up areas in the cell with membranes. A plasma membrane compartmentalizes internal structures while the cell membrane acts as a boundary between the cell and the external environment.

### Model 1 - Phospholipids

Molecular Biology of Membranes H.R. Petty, 2013-06-29 This text attempts to introduce the molecular biology of cell membranes to students and professionals of diverse backgrounds Although several membrane biology books are available they do not integrate recent knowledge gained using modern molecular tools with more traditional membrane topics Molecular techniques such as cDNA cloning and x ray diffraction have provided fresh insights into cell membrane structure and function The great excitement today which I attempt to convey in this book is that molecular details are beginning to merge with physiological responses In other words we are beginning to understand precisely how membranes work This textbook is appropriate for upper level undergraduate or beginning graduate students Readers should have previous or concurrent coursework in biochemistry prior studies in elementary physiology would be helpful I have found that the presentation of topics in this book is appropriate for students of biology biochemistry biophysics and physiology chemistry and medicine This book will be useful in courses focusing on membranes and as a supplementary text in biochemistry courses Professionals will also find this to be a useful resource book for their personal libraries

Aloia,1983      **The Enzymes of Biological Membranes** A.N. Martonosi,2012-12-06 In the first edition of *The Enzymes of Biological Membranes* published in four volumes in 1976 we collected the mass of widely scattered information on membrane linked enzymes and metabolic processes up to about 1975 This was a period of transition from the romantic phase of membrane biochemistry preoccupied with conceptual developments and the general properties of membranes to an era of mounting interest in the specific properties of membrane linked enzymes analyzed from the viewpoints of modem enzymology The level of sophistication in various areas of membrane research varied widely the structures of cytochrome c and cytochrome b5 were known to atomic detail while the majority of membrane linked enzymes had not even been isolated In the intervening eight years our knowledge of membrane linked enzymes ex panded beyond the wildest expectations The purpose of the second edition of *The Enzymes of Biological Membranes* is to record these developments The first volume describes the physical and chemical techniques used in the analysis of the structure and dynamics of biological membranes In the second volume the enzymes and met abolic systems that participate in the biosynthesis of cell and membrane components are discussed The third and fourth volumes review recent developments in active transport oxidative phosphorylation and photosynthesis
