Not Just for the Boys Athene Donald, 2023-04-11 Why are girls discouraged from doing science Why do so many promising women leave science in early and mid career Why do women not prosper in the scientific workforce Not Just For the Boys looks back at how society has historically excluded women from the scientific sphere and discourse what progress has been made and how more is still needed Athene Donald

herself a distinguished physicist explores societal expectations during both childhood and working life using evidence of the systemic disadvantages women operate under from the developing science of how our brains are and more importantly aren't gendered to social science evidence around attitudes towards girls and women doing science It also discusses how science is done in practice in order to dispel common myths for example the perception that science is not creative or that it is carried out by a lone genius in an ivory tower myths that can be very off putting to many sections of the population A better appreciation of the collaborative creative and multi disciplinary nature of science is likely to lead to its appeal to a far wider swathe of people especially women This book examines the modern way of working in scientific research and how gender bias operates in various ways within it drawing on the voices of leading women in science describing their feelings and experiences It argues the moral and business case for greater diversity in modern research the better to improve science and tackle the great challenges we face today

Freedom's Laboratory Audra J. Wolfe, 2018-11-15 The Cold War ended long ago but the language of science and freedom continues to shape public debates over the relationship between science and politics in the United States Scientists like to proclaim that science knows no borders Scientific researchers follow the evidence where it leads their conclusions free of prejudice or ideology But is that really the case In *Freedom's Laboratory* Audra J Wolfe shows how these ideas were tested to their limits in the high stakes propaganda battles of the Cold War Wolfe examines the role that scientists in concert with administrators and policymakers played in American cultural diplomacy after World War II During this period the engines of US propaganda promoted a vision of science that highlighted empiricism objectivity a commitment to pure research and internationalism Working both overtly and covertly wittingly and unwittingly with governmental and private organizations scientists attempted to decide what exactly they meant when they referred to scientific freedom or the US ideology More frequently however they defined American science merely as the opposite of Communist science Uncovering many startling episodes of the close relationship between the US government and private scientific groups *Freedom's Laboratory* is the first work to explore science's link to US propaganda and psychological warfare campaigns during the Cold War Closing in the present day with a discussion of the 2017 March for Science and the prospects for science and science diplomacy in the Trump era the book demonstrates the continued hold of Cold War thinking on ideas about science and politics in the United States

A Homology Theory for Smale Spaces Ian F. Putnam, 2014-09-29 The author develops a homology theory for Smale spaces which include the basic sets for an Axiom A diffeomorphism It is based on two ingredients The first is an improved version of Bowen's result that every such system is the image of a shift of finite type under a finite-to-one factor map The second is Krieger's dimension group invariant for shifts of finite type He proves a Lefschetz formula which relates the number of periodic points of the system for a given period to trace data from the action of the dynamics on the homology groups The existence of such a theory was proposed by Bowen in the 1970s
