Developments in Sustainable Chemical and Bioprocess Technology Ravindra Pogaku, Awang Bono, Christopher Chu, 2013-11-26 Environmental sustainability and development is of critical importance. Technological advances in the production of new energy sources are making their way into our lives in more and more depth every day. However, there is an urgent need to address the technological challenges and advancement of the various chemical and bio processes to maintain the dynamic sustainability of our energy needs. Toward that end, an attempt is being made to look at recent advances, key issues still faced, and where possible, offer suggestions on alternative technologies to optimize sustainable processes. Still considered a new area of science, energy sources themselves are still being discovered, meaning what is financially viable in the current marketplace is changing. For example, energy from plants has not been financially viable in the past because of the high cost of growing, harvesting, breaking down cell walls, disposal of waste products, etc. Materials used to derive energy from sustainable resources is changing, making previously high cost processes more efficient. It is crucial that the industry as a whole works in tandem to develop crops that new technological advances make financially feasible. This book will cover recent advances in the chemicals, bioprocesses, and other materials used in growing and extracting energy from sustainable products. Membrane cell wall digestion issues will also be covered, as well as recovering maximal amounts of energy from sources to limit waste. Finally, a section on safety and control will be presented, which has been poorly covered in other publications. **The Condor**, 1990 Complementary and Alternative Medicinal Approaches for Enhancing Immunity

Mehwish Iqbal, 2022-08-24 Ancient therapeutic systems have played a tremendous role in health preservation all around the globe for thousands of years; even the earliest humans on earth had used these approaches along with simple surgical procedures for the betterment of their health. Concisely written, the author discusses ancient ways to enhance self-healing abilities and stimulate the immune system, such as fasting, meditation, acupuncture, cupping therapy, balneotherapy, and aromatherapy. The importance of nutrition and diet is also examined, as it plays a crucial role in the prevention and causation of diseases. Additional features include: Discusses how the integration of various CAM modalities helps in enhancing self-healing abilities and boosts the human immune system. Contains various topics from different systems of medicines that are taught widely as individual courses or discussed broadly in several institutes. Reviews Eastern pharmacotherapy and how using certain herbs, minerals, and animal-based products aids in maintaining health and alleviating diseases. Using evidence-based knowledge taken from ancient literature and recently published articles, this book will inform readers on the importance of holistic
