A 14-year-old patient sustained a displaced fracture of the radius and ulna after falling from a bicycle. Which of the following pain control interventions is most likely to result in improvement in symptoms related to pain? - answer Applying a splint to the affected extremity

Rationale

Splinting is an effective non-pharmacologic intervention to reduce pain associated with fractures. This will also help to minimize complications. Topical creams and elevation of the extremity will not help with pain control. The application of ice in an appropriate manner can help, but not warmth which would be contraindicated in the early stages of the injury.

Assessment of the fontanelle provides the most useful information for which two components of the primary survey? - answer Circulation and disability

Rationale

A sunken fontanelle is a red flag for circulation assessment in pediatric triage and may indicate dehydration. A bulging fontanel is a red flag for disability assessment in pediatric triage and can indicate increased intracranial pressure.

A 6-month-old is seen for a recurrent respiratory infection. During the assessment, the mother adds that the patient's stools seem to be fatty or "greasy". Which of the following disease processes would be a primary concern for this child? - answer Cystic fibrosis

Rationale

In patients with cystic fibrosis, thick mucus inhibits the release of pancreatic enzymes necessary for digestion. This results in impaired absorption and the inability to utilize ingested fats. These fats are excreted in the stools and can present as "fatty" or "greasy". Combined with the recurrent upper respiratory infections for an infant, cystic fibrosis should be ruled out. The other three disease processes frequently present with respiratory issues but fatty stools would not normally be seen.

Emergencies Medical Emergencies and Communicable Diseases Professional Issues *Training for Doctoral Research* J IAN Mason, 2009-01-30 Following the rapid expansion of translation studies as an emergent inter discipline over recent decades demand for doctoral research opportunities is now growing fast in many countries At the same time doctoral training packages of a generic nature have been elaborated and refined at many universities drawing on long traditions of doctoral research in established disciplines A degree of consensus no doubt exists on such matters as the need for rigor method and the generation of new knowledge Beyond that however there are a host of issues specific to translation and interpreting studies that remain under researched and under discussed Contributors to this special issue encourage reflection on a range of issues in ways that foster further debate and collaboration on the development of doctoral studies within the field A number of concrete proposals are offered that could be adapted to local situations in different countries and academic settings While some of the contributions adopt a mainly empirical stance others adopt a broad perspective on training citing examples of widely differing projects Two contributors offer insights from personal experience of doctoral study while another describes the organization of doctoral work within the conceptual framework of a research group All consider training from the angle of student needs and offer concrete suggestions for ensuring that doctoral candidates are equipped with the guidance concepts methods and tools required for success Free Energy Computations Tony Lelièvre, Gabriel Stoltz, Mathias Rousset, 2010 This monograph provides a general introduction to advanced computational methods for free energy calculations from the systematic and rigorous point of view of applied mathematics Free energy calculations in molecular dynamics have become an outstanding and increasingly broad computational field in physics chemistry and molecular biology within the past few years by making possible the analysis of complex molecular systems This work proposes a new general and rigorous presentation intended both for practitioners interested in a mathematical treatment and for applied mathematicians interested in molecular dynamics **High Performance Concrete** Y. Malier, 2018-05-08 Provides a thorough review of properties durability and use of high performance concrete derived from recent research and experience This book contains contributions from the leading French Canadian and Swiss researchers designers and material specialists translated into English for the first time **Damage Assessment and Reconstruction after War or Natural Disaster** Adnan Ibrahimbegovic, Muhamed Zlatar, 2009-05-14 1 1 SAFETY OF CIVIL STRUCTURES Society expects that the failure of civil structures is extremely rare and relies on the care and expertise of the professionals involved in the design construction and maintenance of structures This is in particular true for public technical systems such as transportation or energy supply systems and structures such as bridges Structural safety may be defined as follows Adequate safety with respect to a hazard is ensured provided that the hazard is kept under control by appropriate measures or the risk is limited to an acceptable value Absolute safety is not achievable It is thus not the structure as such that is designated safe but rather the people goods and the environment in its surroundings The continued use of existing structures is of great importance

because the built environment is a huge economic and political asset growing larger every year Nowadays evaluation of the safety of existing structures is a major engineering task and structural engineers are increasingly called upon to devise ways for extending the life of structures whilst observing tight cost constraints Also existing structures are expected to resist against accidental actions although they were not designed for Engineers may apply specific methods for evaluation in order to preserve structures and to reduce a client s expenditure The ultimate goal is to limit construction intervention to a minimum a goal that is clearly in agreement with the principles of sustainable development

Non-Destructive In Situ Strength Assessment of Concrete Denys Breysse, Jean-Paul Balayssac, 2021-04-27 The book presents the work of the RILEM Technical Committee 249 ISC Addressing the effective application of new recommendations for non destructive in situ strength assessment of concrete it provides information about the different steps of the investigation and processing of test results until the delivery of strength estimates and includes tables giving the minimum required number of cores in a variety of situations as well as several examples of how the recommendations can be used in practice The book explores a topic which is of major importance i e the assessment of concrete compressive strength in existing structures This property both mean and standard deviation is a key input in many cases such as the reinforcement of structures the safety checking the extension of service life As the new RILEM recommendations imply a deep revision and improvement of field practice the book is intended for managers of structures structural engineers and specialists of NDT that have to answer these issues More widely it will benefit engineers and students who are interested in NDT and in the safety analysis of structures
