

Genetics: Mendel's Experiments

Answer these 10 questions based on a hypothetical plant of purple flowers.

1. What is considered the father of genetics? *Mendel*
2. Summarize Mendel's three principles:
 - a. Principle of Dominance: *dominant alleles are expressed, recessive are not*
 - a. Principle of Segregation: *each parent passes down one of two alleles, which combine to form offspring*
 - a. Principle of Independent Assortment: *traits are passed separately and do not affect each other*
3. What are dominant forms of a gene called? *dominant*
4. What is a Punnett Square used for? *to see the genetic possibilities for offspring and predict probabilities*
5. What is genotype? *the genetic makeup of an organism*
6. What is phenotype? *the expressed physical characteristics of an organism*
7. What is a trait? *a specific characteristic or individual*
8. What might a dominant offspring be expected from a cross of? *dominant with dominant or dominant with recessive*
9. Two parents with the genotype Pp for a particular character crossed by a dominant allele, one dominant. What would the genotype for the particular character be? *show the Punnett square and give the phenotype ratio*

all offspring from genetic cross are Pp (heterozygous dominant) all

Pp	Pp	Pp
Pp	Pp	pp

*all dominant
all with dominant character*

10. Show the cross for a genetic character caused by a dominant allele but expect two heterozygous parents. What would their phenotype ratios be? *show the Punnett square and give the phenotype ratio*

Pp x Pp will have 3:1 dominant to recessive

Pp	Pp	Pp
Pp	Pp	pp
