Interaction in Digital News Media Mario Pérez-Montoro, 2018-09-12 Digital News Media DNM are characterized by

their efforts to provide consumers with new content interaction experiences which contrast with the more passive

experiences provided by traditional news media This book directly addresses these interaction experiences taking the reader from underlying principles to actual practices To meet this objective the book undertakes a characterization of interactivity

in DNM and explores the boundaries between storytelling and direct data access It examines information visualization trends present in the media and practices in non fiction storytelling in the context of the current wave of VR technology Moreover it

addresses how UX research and evaluation methods can be applied to inform the design of interactive media It also analyzes the concept of Newsonomics and it examines the reform of intellectual property law and legislation governing authors rights

The book concludes by analyzing the scientific production of interaction over the last 10 years extracting the main

conclusions and highlighting the lessons that can be extracted from the previous chapters **EUROGRAPHICS '87** Guy

Maréchal, 1987 **Digital Collaborative Learning in General, Higher, and Business Education** Henrik

Bellhäuser, Sanna Järvelä, Rene Roepke, Christin Siegfried, Carolyn Rose, 2025-04-10 Please note that all spontaneous submissions are required to submit an abstract and await feedback before submitting the full manuscript any spontaneous submissions which only submit a full manuscript will be rejected Collaborative learning takes place with the expectation that people will achieve more together than alone Crucial to this is the appropriate composition of groups and the participation of each group member through communication written verbal or non verbal by sharing ideas experiences and knowledge in a diverse and elaborate way However collaboration is extended and substantially changed by the Internet and other technologies The always on connection to the Internet enables people to be in contact with peers anytime and anywhere and can help to overcome social isolation which is particularly common in digital learning contexts not least because it can positively influence learner satisfaction The ability to record speech and writing in a digital context encourages reflection on one's own contributions before they are made available to the group Moreover digital applications and methods can support the externalization of one's own thinking and learning processes to the group members AI helps to investigate how collaborative learning works e.g. through data driven methods of learning analytics

Multilingual Lexical Recognition in the Mental Lexicon of Third Language Users Weronika Szubko-Sitarek,2014-10-07 The monograph constitutes an attempt to demonstrate that trilinguals should be considered as learners and speakers in their own right as opposed to L2 learners with a view to enumerating consequences this would bring to third or additional language teaching Its theoretical part offers an insight into the structure of the multilingual mental lexicon which is a product of the interplay of a whole array of cross linguistic factors in the minds of multilingual speakers The empirical part reports the findings of an empirical study which aimed to investigate connections which are formed between multiple languages in a multilingual mind All the aspects analyzed in the experiments are part of a broader question of how multilinguals make their lexical decisions and more specifically how they recognize words from different languages The book closes with the discussion of the role of the obtained results for multilingual didactics as well as some possible areas for future research
