

Meiosis Practice Problems

Topic 10.1 and 10.2

Name:

KEY

Hour:

Score:

/8

1. [2 marks] The micrograph shows a plant cell of *Lilium grandiflorum* during meiosis.

[Source: vcbio.science.ru.nl; thanks to Dr. J. Derksen]

Identify, giving reasons, the stage of meiosis shown by this cell.

Identify: Provide an answer from a number of possibilities

Explain: ("giving reasons") Give a detailed account including reasons or causes

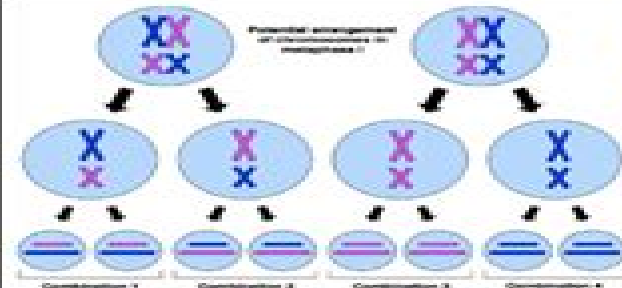

Claim: The stage of meiosis is Anaphase II

Evidence: 1. There are four cells being formed; 2. Sister chromatids have been split apart (because the chromosomes are NOT "X" shaped)

Reasoning: Anaphase II is the only stage of meiosis that forms four cells. In Anaphase II, sister chromatids are pulled apart and move toward opposite ends.

2. [2 marks] Outline the law of independent assortment.

Outline: Give a brief account or summary

Two or more traits/genes are inherited independently of one another.

Observed for traits/genes that are not linked together on a chromosome

Homologous chromosomes align independently/randomly on equator during metaphase I

Each allele combination is equally likely

Pursuing Practical Change Heather Dean, Amber E. Wagnon, 2024-02-27 Today's educators are aware of the need for social emotional learning in their classroom and can share the tenets of a culturally responsive pedagogy. However, what they lack is the practical strategies for implementation of these pivotal classroom practices. **Pursuing Practical Change Lesson Designs That Promote Culturally Responsive Teaching** is an answer to this need. This book goes beyond just providing theory and data but delves into the actual practices needed to be successful in today's classroom. Within the chapters of this book, both novice and veteran teachers will find support through the lesson plans of practitioners, their reflections, and various strategies for classroom instruction.

A Practical Guide to Toxicology and Human Health Risk Assessment Laura Robinson, 2018-11-20 Toxicology, the study of the adverse effects of chemicals on living organisms, is the cornerstone to all aspects of chemical safety, and knowledge of the subject is needed in a wide spectrum of fields from the chemical industry to medicine, emergency services, forensics, and regulatory science. Toxicology involves the study of symptoms, mechanisms, treatments, and detection of poisoning, especially the poisoning of people. The many problems arising from a poor understanding of toxicology and its applications in hazard communication and chemical safety motivated the author's training courses and webinars, leading to this valuable book. Providing a practical and accessible guide, **A Practical Guide to Toxicology and Human Health Risk Assessment** enables readers to quickly build up knowledge and understanding of toxicology and its use in hazard identification, which is a fundamental part of chemical risk assessment. The book also covers current toxicological testing strategies and the use of physicochemical test data in hazard identification and exposure assessment. Examples are provided throughout the book to highlight important issues, along with a summary of the key points that have been covered in each of the respective chapters. The book concludes with a listing of online resources on toxicology and risk assessment.
